Dear Professor Tamai;

Thank you for friendship and good times you extended to me on my recent great experience in Japan.

Thank you for scheduling the translation and publication of the second edition. It can bring lots of benefit to lots of good people.

And thank you for the opportunity to provide some of my thoughts for the FORWARD.

Topmost Greetings of the Season to You,

Larry Miles

To Prof Jamai

For the translation of Miller's 2nd Ed. into the Japanese language.
Forward.

I am happy that my Jap. Friends can now, at once, proceed to deepen their knowledge of the V/E / Approaches and put them into valuable use to increase their achievements -

Before this book, I was often saddened by the distressed feeling which many people in business, professional, scientific or educational work felt, after informative lectures of 2 to 6 hrs. "How can I right now start to learn enough more so that I can really use it, there is no training scheduled near me"? To meet this need, as well as to add some new and some improved technique, this book was arranged & written.

It is in "learning sequence", so that, whether it is used by individuals or in groups, knowledge & understanding grow in orderly progression from Chap 1-2-3-etc. Persons without access to group learning activities, are progressively learning & developing skills. For classroom & seminar, the prog-arrangement aids teacher & learner alike. Worldwide competition brought the need for the "good" to become the "Best". To meet this need, the V/E / problem identifying & solving approaches found here, came forth, and when properly used, accomplish it.

Because of proven achievement in the arts & sciences, in industry, in productivity, in quality, in creativity, in competition, and in personal friendship, I greatly honor the Japanese people.
