Preface

We are pleased to bring you the sixth volume of Oshkosh Scholar. It reflects the commitment of UW Oshkosh to provide diverse learning opportunities for students including the opportunity to collaborate with faculty advisers on their research projects. In addition, students gain publication experience as they work with a team of editors and reviewers to prepare their articles for publication.

While education within a classroom setting is the foundation upon which universities are built, some of the most exciting learning experiences are those that take place outside of the classroom and are fueled by the individual student’s interest and motivation. Collaborative research projects allow students to build the skills necessary for lifelong learning and create an environment that promotes rigorous academic engagement. In this volume, we are proud to present some of the finest examples of this academic inquiry.

Several articles in this year’s edition of Oshkosh Scholar aptly illustrate the relevance of academic research and practical applications to today’s problems. Using the example of Fond du Lac, Wisconsin, Jennifer Haegele uses amateur aerial photographs to update urban flood maps, which can aid in local flood planning. Similarly, Michael Beaupre questions whether text messaging bans for drivers actually decrease the number of fatal traffic accidents.

Chris Tempas and Sara Willkomm chart the victories of historic groups and individuals who fought discrimination. Tempas probes school desegregation in Racine, Wisconsin, and reveals a successful and influential experiment in equal education. Women’s efforts to overcome gender discrimination are also featured as Willkomm introduces us to the key players in the women’s rights movement leading up to the famous Seneca Falls Convention.

Other articles provide insight into how interactions between people shape the world around us in profound ways. Matthew Moebius demonstrates a shifting conception of witches throughout a millennium, ending with the now-common stereotype of witches as females. Rebecca Stupka takes us into the world of psychology through a study of accommodating patterns in conversations between men and women. Turning to literature, Nicole Selenka reveals surprising and significant references to the Catholic Holy Trinity in Toni Morrison’s Beloved.

We invite you to peruse this varied sample of undergraduate exploration and discovery. We would like to thank the student authors, faculty advisers, and faculty reviewers who contributed to this volume. Additional thanks go to Susan Surendonk and this year’s student editors, Arielle Smith and Amy Knoll. Without their passion and dedication, this publication would cease to exist. We would love to hear your thoughts about this year’s volume. Simply send us an e-mail at ugjournal@uwosh.edu.

Clerical Conceptions of Magic and the Stereotype of the Female Witch

Matthew Alexander Moebius, author
Dr. Kimberly Rivers, History, faculty adviser

Matthew Alexander Moebius graduated from UW Oshkosh in May 2011 with a degree in history. His interest in medieval Europe as a primary field of study emerged from a longstanding interest in European folklore and mythology, and was developed under the guidance of Dr. Kimberly Rivers. His research focus in the field of medieval magic and occultism began to take shape during his work for the European History Seminar in spring 2011.

Dr. Kimberly Rivers is an associate professor and the department chair of history at UW Oshkosh. She received her Ph.D. from the University of Toronto in 1995, and her research interests are in late-medieval intellectual history, and memory and mnemomics in late-medieval preaching and religious devotion.

Abstract

Working from the foundation laid by leading historians of medieval witchcraft—most notably Richard Kieckhefer, Norman Cohn, Michael Bailey, and Hans Peter Broedel—this study examines the conceptual development of a predominantly feminine witchcraft stereotype as understood within the perceptions of the educated clerical elite. The theories of these historians, each approaching the study of witchcraft in different ways and addressing mostly separate aspects of the phenomenon, are reconciled with one another and tied together in hitherto unarticulated ways to form a single, cohesive narrative of the emergence of the idea of the exclusively female witch. The gradual evolution of clerical conceptions of magic shifted in the later Middle Ages from a masculine conception to a more gender-neutral one, opening the door to feminization. The construction of the witches' sabbat, influenced by largely feminine pagan mythological motifs, pushed the idea in the direction of a female conception. Finally, influential writings dominated by aggressively misogynistic ideology finalized the association between women and witchcraft.

In the last four decades, the historical work done on late medieval witchcraft has been extensive. This scholarship has found the general topic of witchcraft to be one of immeasurable complexity and, therefore, the general approach of historians of medieval witchcraft has been to narrow their individual studies. Historians Richard Kieckhefer and Norman Cohn have done foundational work on the conceptual development of witchcraft. Kieckhefer’s early work produced detailed analyses of trial records, including inquisitorial interrogations and witness testimonies, with the ultimate goal of uncovering how witchcraft was perceived by the common populace. Cohn’s study of the relationship between witchcraft mythology and ideas associated with earlier heretical groups is still heavily relied upon by current witchcraft historians. Much excellent work has also been done by recent historians, notably Michael D. Bailey and Hans Peter Broedel. Bailey’s work has emphasized the role of the evolution of general conceptions of magic throughout the Middle Ages in contributing to the creation of a defined system of witchcraft mythology in the fifteenth century. Broedel’s primary focus has been on the influential 1487 anti-witchcraft treatise *Malleus Maleficarum*,
and on the various elements that make up the construction of witchcraft represented therein.

One of the specific aspects of witchcraft that has seen considerable attention in recent years is its relationship to gender. Both Bailey and Broedel have made admirable contributions to uncovering the historical development of a feminine witch concept. Bailey’s theories of the feminization of the witchcraft concept tie in with his larger ideas on the evolution of clerical conceptions of magic. Broedel has discussed at length the influence of feminine mythological motifs taken from pagan traditions. Each present compelling ideas, but in each case the specificity of the scope of their arguments has limited the overall effectiveness of their conclusions. This study builds on the foundations laid by these historians’ theories. It will draw not only on these recent studies of witchcraft and gender, but also on the general scholarship of witchcraft mythology. Combined with clues from the primary sources, the threads of these historical arguments will be woven together into a more cumulative view of the gender associations of medieval witchcraft.

Before attempting this task, certain distinctions must be made clear. When dealing with the history of witchcraft the researcher is constantly confronted with the problem of separating perception from reality. The history of actual events as they occur in tangible space is sometimes entirely distinct from the history of the conception of those events. This study is concerned primarily with the conceptual history of witchcraft and gender as it developed within the consciousness of the educated clerical elite. The nature of the larger subject of witchcraft makes the additional separation of learned and popular conceptions necessary.

The concept of witchcraft as understood by clerical authorities evolved differently than the popular ideas of malevolent magic and sorcery and was made up of entirely different components. As such, the ways in which popular and learned concepts were connected with gender-related themes throughout the course of their respective developments were equally different. The learned conception of witchcraft had developed by the end of the fifteenth century into a mythology that predominantly favored the stereotype of the female witch. This feminization of witchcraft occurred as a result of the combined influences of the following: (1) significant changes in the clerical conceptions of magic prior to, and leading into, the fifteenth century; (2) the construction of the witches’ sabbat from anti-heretical stereotypes and feminine mythological motifs; and (3) clerical misogynist attitudes. The resulting conflation of feminine associations was emphasized in—and reinforced by—the Malleus Maleficarum, assuring the ultimate feminization of learned witchcraft mythology.

Clerical conceptions of magic in the late Middle Ages cannot be fully understood without delving into older theological doctrine. The learned authorities of the fourteenth and fifteenth centuries drew their understanding of magic from sources dating as far back as late antiquity. Most significantly, St. Augustine of Hippo’s writing on the subject in the early fifth century established foundational theological doctrine regarding the magical arts. The classical magic of Augustine’s time was thought to be performed through the assistance of spiritual intermediaries. As no human being was capable of producing any supernatural or preternatural effect on his own, assistance was thought to have been sought from a more capable entity. Practitioners often claimed that these intermediaries were merely benign spirits either of the elements or of the dead, or possibly even angels.¹ Augustine, however, concluded that they could be nothing other than demonic in nature. If any sorcerer or magician believed otherwise, he was the victim of demonic deception. In 425 Augustine wrote in City of God:

Who does not see that all these things are fictions of deceiving demons, unless he be a wretched slave of theirs, and an alien from
the grace of the true Liberator? . . . Rather let us abominate and avoid the deceit of such wicked spirits, and listen to sound doctrine. As to those who perform these filthy cleansings by sacrilegious rites, and see in their initiated state . . . certain wonderfully lovely appearances of angels or gods, this is what the apostle refers to when he speaks of “Satan transforming himself into an angel of light.” For these are the delusive appearances of that spirit who longs to entangle wretched souls in the deceptive worship of many and false gods and to turn them aside from the true worship of the true God. . . .

Furthermore, in *De Doctrina Christiana*, he elaborated on the subject by drawing a comparison between this demonic pact and the worship of idols:

Something instituted by humans is superstitious if it concerns the making and worshipping of idols, or the worshipping of the created order or part of it as if it were God, or if it involves certain kinds of consultations or contracts about meaning arranged and ratified with demons, such as the enterprises involved in the art of magic, which poets tend to mention rather than to teach.3

Since such practices involved supplication and sacrifice to entities that could be nothing other than demons, participation in them was tantamount to idolatry and apostasy.4

So all the specialists in this kind of futile and harmful superstition, and the contracts, as it were, of an untrustworthy and treacherous partnership established by this disastrous alliance of men and devils, must be totally rejected and avoided by the Christian. “It is not,” to quote the apostle, “because an idol is something, but because whatever they sacrifice they sacrifice it to devils and not to God that I do not want you to become the associates of demons.” . . . So in all these teachings we must fear and avoid this alliance with demons, whose whole aim, in concert with their leader, the devil, is to cut off and obstruct our return to God.5

Augustine’s stance on magic remained powerfully influential on the official Church position even at the outbreak of the witch-hunting fervor a thousand years later.

The next document of significant import came roughly around the turn of the tenth century. This text, known as the canon *Episcopi*, first appeared in its earliest known version in a canonical collection compiled sometime around 906. The text opens with a condemnation of *maleficium*, or harmful magic,6 and an urgent warning to bishops and their clergy to push for an eradication of its practice wherever it might be encountered.7 Of more ultimate significance, however, is its commentary on a more specific concern:

It is not to be omitted that some wicked women, who have given themselves back to Satan and been seduced by the illusions and phantasms of demons, believe and profess that, in the hours of night, they ride upon certain beasts with Diana, the goddess of pagans, and an innumerable multitude of women, and in the silence of the night traverse great spaces of earth, and obey her commands as of their lady, and are summoned to her service on certain nights. But if they alone perished in their faithlessness, without drawing many other people with them into the destruction of infidelity. For an innumerable multitude, deceived by false opinion, believe this to be true, and so believing, wander from the right faith and return to the error of pagans when they think that there is anything of divinity or power except the one God.8
The condemnation made in this passage is not of magical practice in general, but of a specific set of pagan traditions. The nocturnal procession of Diana to which it refers represents a conflation of various pagan traditions of both classical and Germanic origin. Significantly, it focuses its condemnation on belief rather than direct participation. Although the *Episcopi* itself addresses these pagan traditions as separate from general practice of magic, that separation was to deteriorate over time and the two ideas eventually became conflated. Thus the *Episcopi*’s pronouncement of the falsehood of the pagan nocturnal procession in time came to apply to all magical practices. Roughly a century later, the legal scholar Burchard of Worms composed his *Decretum*, which included a repetition of the *Episcopi*’s condemnation of belief in the processions of Diana. When he addressed enchantment and sorcery, he condemned not only practice, but belief in such arts. Additionally, with the merging of the ideas of *maleficium* and the nocturnal processions of Diana, the learned conception of magic also saw one of its earliest significant influxes of specifically feminine imagery. Although the clerical conceptions of magic largely remained either gender-neutral or of masculine leanings for some time, the Diana mythology would eventually contribute to the feminization of the witchcraft mythology. This influence will be further discussed later.

The *Decretum* of Burchard and other similar texts indicate that the concern of clerical authorities during the eleventh century was focused more on demonic delusion and false belief than on any real threat of actual magical practice. Participation in superstitious ceremonies or rites was considered infidelity to the Church and to God, and belief in the efficacy of such rites saw even more focused condemnation than direct participation. One of Burchard’s admonitions reads, “Have you ever believed or participated in this perfidy, that enchanters and those who say that they can let loose tempests or to change the minds of men? If you have believed or participated in this, you shall do penance for one year on the appointed fast days.” Punishments of this nature—varying degrees of penance—are typical throughout Burchard’s text, and are indicative of a fairly dismissive level of concern compared to the witch burnings of the fifteenth century.

This relatively dismissive attitude toward magic persisted until the twelfth century, when European intellectuals discovered (or rediscovered) hosts of classical, Hebrew, and Arabic texts on the occult arts. The magical practices described in these texts were highly learned, authoritative, and sometimes even explicitly demonic. The contents were typically instructive as well as descriptive, and the branches of magical learning they included were usually astrology, alchemy, various forms of divination, and necromancy. As such, medieval scholars were, for the first time since antiquity, provided with an avenue of esoteric study that—unlike common pagan folk traditions—presented magic in the form of a scholarly pursuit. Western Europe suddenly saw a rise in interest, as well as actual practice, of these varieties of “learned magic.” This caught the attention of clerical authorities, and they began taking the threat of actual demonic magic more seriously. Of special concern was the newly widespread interest in necromancy.

This diabolical practice was one of the most highly complex, ritualized, and formalistic forms of magic most clerics would likely have encountered. It was never explicitly described in terms of gender, but there were several factors that led to its informal designation as a decidedly masculine field. Its mastery was entirely reliant on the study of complicated texts, and thus was restricted to the highly educated. The level of education required, the mastery of language, and the excessive amount of disciplined study would have made it difficult for most clerics to envision female necromancers. In fact, those same requirements led to the educated male clerics themselves making up the majority of practicing necromancers in the twelfth and thirteenth centuries.
spite of this, Bailey has argued that the understanding and concerns of clerical authorities over necromantic sorcery in this period were essential to the later development of the learned concept of witchcraft in the fifteenth century, including its eventual association with women.\textsuperscript{18}

The urgent sense of concern felt by clerical authorities about this pervasive demonic practice and the dangers it posed reawakened condemnation of magic in general. As the eyes of the Church were opened to the threat of these demonic rituals, they turned also to the common maleficium that had been so marginalized since the time of the canon Episcopi. Authorities began to move away from the notion that magic was nothing but a devilish illusion. They flocked back to the teachings of Augustine: magic was real, and it was always demonic. This view was given weighty support by prominent theologians like St. Thomas Aquinas in the thirteenth century. St. Thomas wrote:

\ldots if we take a miracle in the strict sense, the demons cannot work miracles, nor can any creature, but God alone: since in the strict sense a miracle is something done outside the order of the entire created nature, under which order every power of a creature is contained. But sometimes miracle may be taken in a wide sense, for whatever exceeds the human power and experience. And thus demons can work miracles, that is, things which rouse man’s astonishment, by reason of their being beyond his power and outside his sphere of knowledge. \ldots It is to be noted, however, that although these works of demons which appear marvellous to us are not real miracles, they are sometimes nevertheless something real. Thus the magicians of Pharaoh by the demons’ power produced real serpents and frogs.\textsuperscript{19}

It was in this light that theologians began to view popular magic and common folk traditions. These traditions, whether actually containing any elements of harmful magic or not, were increasingly placed by learned authorities under the umbrella of maleficium. If all magic was demonic in nature, then even the softly spoken incantations of the village healer who treated sick patients with ritually gathered herbs could be easily perceived as dangerous sorcery. Once this was established, however, authorities faced another problem of understanding. The archetypical necromancer was, by necessity, a scholar. He invoked demons and compelled them to perform his will, but he achieved this only through intense study and the performance of complex formulaic rituals. How, then, could one explain the common village maleficus mastering control of similar demonic forces through practices that were absurdly simplistic by comparison? How could the uneducated weather-magician raise a devastating hailstorm, killing cattle and destroying crops, with none of the labors of the learned sorcerer? Where did he learn his art if not from secret occult texts? In pursuit of a solution to this problem, clerics and theological writers spent generations inventing a mythology that would fit their worldview. This mythology was not developed through a singular conscious effort, but through a slow process of altering and absorbing different ideas, and influenced by established theological doctrine, pagan mythology, and stereotypes associated with heretical sects. The finished product was to become the definitive central element of the concept of witchcraft: the witches’ sabbat.\textsuperscript{20}

The sabbat, a supposedly secret nocturnal gathering of witches where diabolical rituals were thought to be performed, provided a solution for the discrepancy in the modes of operation between necromancy and witchcraft. The functionality of the sabbat, in a way, came through exaggerating one element of the idea of necromantic sorcery to accommodate for the loss of another. When necromancers summoned
demons, they were viewed by theological authorities as submitting to a pact with the summoned demon, and, by association, with the devil. This demonic pact might be implicit rather than explicit, as the necromancer might be (and often was) operating under the assumption that it was he who held the dominant position and that the demon was submitting to him. Nevertheless, whether that sorcerer knew it or not, he had been drawn into a contractual relationship with the devil. The witches’ sabbat took this concept even further. For religious authorities, the central aspect of witchcraft became the complete and explicit submission of the witch to the devil. The sabbat was the secret assembly at which this ritual submission would be made. In exchange for submission (which often included certain ghastly costs\(^{21}\)), the devil would grant the witch immediate knowledge of demonic magic and the power to wield it. In this way authorities could understand how villages and countrysides could be found to contain innumerable uneducated wielders of diabolical *maleficium*. As this separation of witchcraft from educated ritual and formulae allowed for the emergence of a new figure in the common witch, the restriction of magic to the masculine gender was also lifted. In this way, the creation of the sabbat opened the door for the feminization of magic.\(^{22}\)

After this door was opened, witchcraft quickly made the jump from the previous ideas of masculine magic to being a gender-neutral field. The mythology of the sabbat itself contained several elements that, when taken together, had perhaps the largest influence on the gendering of the official concept of witchcraft. This mythology was developed over a considerable period of time, and went through several varying interpretations as it absorbed influences from various sources. The final picture of the demonic assembly in its most elaborate form has been most clearly and concisely described by Broedel, who has broken the sabbat mythology into six parts:

1. On the appointed night, the sectaries assembled at a remote or concealed site, often flying or riding demonic animals; 2. once there, they summoned the devil in one of his many forms, and worshiped him in disgusting or humiliating ways, most characteristically by the obscene kiss; 3. at the devil’s command, they renounced Christ in graphic fashion, trampling on or otherwise abusing the host; 4. they slaughtered infants or children, who were brought along for this purpose, and put their flesh to some foul and often magical use; 5. they indulged in a high-spirited revel, eating, drinking, and dancing, until the evening’s festivities were concluded with an orgy (6), in which they violated as many sexual conventions as the fertile imagination of the narrator could devise.\(^{23}\)

Each of these elements could appear in the sabbat mythology independently or in various combinations. They all came together in concert in the most well-defined and elaborate descriptions. This final picture of the sabbat became solidified in clerical conceptions by the middle of the fifteenth century, but each of the various individual elements began their influences in earlier stages. Each can be claimed to have contributed in its own way to the gendering of the concept of witchcraft. As will be shown, not every element advanced a specifically female conception, but those that did proved to combine more effectively with conscious outside influences that would later intervene in favor of a predominantly feminine witchcraft mythology.

The majority of Broedel’s six elements can be traced directly to the influence of clerical conceptions associated with certain heretical sects of the twelfth to fourteenth centuries. The second half of the twelfth century saw outbreaks of heresy in various parts of Europe, which drew considerable attention from the Church. Of these heretical groups, the most significant in their influence on the development of witchcraft were the Waldensians. When clerical authorities began persecution of the
Waldensians, they encouraged the spread of outlandish accusations of frightening misconduct. The resulting stereotypes that became associated with this heretical group included their participation in secret nocturnal meetings, worship of the devil, and incestuous orgies.24 These accusations were taken seriously by popes, and Gregory IX’s 1233 papal bull *Vox in Rama* named the charges against the heretics and ordered their condemnation. Many of the practices alleged by Gregory perfectly fit the model that would later be applied to the witches’ sabbat:

> . . . a black cat25 about the size of an average dog, descends backwards, with its tail erect. First the novice, next the master, then each one of the order who are worthy and perfect, kiss the cat on its hindquarters; the imperfect, who do not estimate themselves worthy, receive grace from the master. . . . When this has been done, they put out the candles, and turn to the practice of the most disgusting lechery, making no distinction between those who are strangers and those who are kin. Moreover, if by chance those of the male sex exceed the number of women, surrendering to their ignominious passions, burning mutually in their desires, men engage in depravity with men. Similarly, women change their natural function, which is against nature, making this itself worthy of blame among themselves. . . . They even receive the body of the Lord every year at Easter from the hand of a priest, and carrying it in their mouths to their homes, they throw it into the latrine in contempt of the savior.26

These accusations were so effective that it became standard procedure to apply them to groups that were perceived as threatening to the Church.27 Similar accusations employed against another heretical sect in the fourteenth century, the Fraticelli, included all of the elements of the Waldensian accusations with the addition of ritual cannibalistic infanticide.28

It should come as no surprise then that these same anti-heretical stereotypes were applied with equal vigor to the frightening new sect of *malefici* that was emerging in the consciousness of the clerical authorities in the fourteenth century.29 By the early fifteenth century, these stereotypes had become thoroughly embedded in the mythology of witchcraft. This was accomplished with the aid of several pieces of extremely influential writing on the witchcraft sects, mostly from the 1430s. The most significant of these was, without a doubt, the *Formicarius* of 1438 by the Dominican theologian Johannes Nider. The *Formicarius*, along with other contemporary pieces like the *Errores Gazariorum* (of anonymous authorship) and the treatise of the lay magistrate Claude Tholosan, described in detail the demonic sabbat which had by now thoroughly absorbed the anti-heretical stereotypes.30 These texts were also the first available for wide circulation among clerical and inquisitorial authorities, and so fueled the spread of witch-hunting fervor that was just beginning to take off.31

Since the heretical practices described in these stereotypes were freely associated with both genders, the witchcraft mythology that developed in the regions where these influences were strongest remained gender-neutral for a considerable time. Of all of the texts described above, only Nider’s gives preference to the idea of the female witch, and even he doesn’t make any insistence of exclusivity. In all of the texts, both genders participate freely (Nider merely claiming that women were perhaps more frequent participants than men).32 Areas in which anti-heretical stereotypes played an especially important role in the development of the sabbat (Switzerland, for example) initially saw significantly more men brought to trial than women. Other cultural contexts saw entirely different paths of development. There were regions where influences of popular magic traditions and pagan mythologies contributed just as strongly
to the creation of the sabbat mythology as the anti-heretical stereotypes. The often predominantly feminine imagery associated with these popular traditions and mythological influences contributed significantly to the eventual creation of the idea of the female witch. In the end, these regionally variant ideas would converge into a more uniform mythology, carrying that feminine emphasis to the level of a universal stereotype.

Perhaps the most significant of these feminine mythological influences was that of Diana and her nocturnal processions. Popular belief in the legends of Diana, who supposedly led a raucous procession of women through the night, were based on a combination of similarly themed beliefs that came together to form an amalgam roughly centered around the nocturnal activities of women and female spirits. The conflation of ideas that occurred in the texts following the condemnation in the canon Episcopi created a direct association between this piece of pagan mythology and the idea of maleficium. As maleficium became synonymous with diabolical witchcraft, it naturally followed that these associated pagan motifs would be drawn into the cumulative concept of witchcraft. The manner of its inclusion in the official witchcraft mythology was the idea of night flight. Witches were thought to rise from their beds at night and fly (a marvel achieved through any of a number of sinister magical operations) in devilish processions to the secret location of the sabbat.

Even before its absorption into the witchcraft mythology, the legends of Diana had become associated with other similar traditions of nocturnal female spirits. The ghostly female monsters known as lamiae or strigae came down from antique pagan tradition, and had, by the beginning of the fifteenth century, already become indistinguishable from the myths of Diana and her bonae res to most clerics. The lamiae were spirits, usually taking the forms of old hag-like women, who stole into houses at night to kill children. For learned clerics who had already characterized Diana’s bonae res as demons, the ideas were similar enough to cause confusion, and learned commentators eventually created from them a single construct drawn from elements of both traditions. It was this cumulative construct that was absorbed into the witchcraft mythology in the early fifteenth century. The treatises on witchcraft from the 1430s demonstrate the conflation. The secular magistrate Claude Tholosan writes: “. . . Further, they imagine in dreams that they travel bodily at night, most often on Thursdays and Sundays, in the company of the devil, in order to suffocate children and strike them with sickness. They then extract the fat of the dead children and devour it and go to a certain place where they hold the synagogue of the region.” Here the reader can see the influence of Diana legends as the witch ventures forth at night in a procession led by the devil. The witch then enters the homes of others and murders children in their sleep, as did the lamiae. Each serves a purpose in the greater sabbat mythology: the slaying of children is used to obtain material remains to be used in the satanic rituals, and the nocturnal procession serves as a means to facilitate those deaths and as transport to the sabbat itself. Furthermore, the inclusion of the child-slaying elements of the lamiae myths creates a point of compatibility with the infanticide stories of the anti-heretical stereotypes. In this way the pagan mythological influences were able to combine with the anti-heretical stereotypes in a mutually reinforcing way, which also allowed the predominately feminine imagery associated with the former to begin superseding the gender-neutrality of the latter.

Finally, perhaps the most obvious factor influencing the ultimate feminization of the official witchcraft stereotype was the prevalence of clerical misogyny. Misogynistic tendencies in the clerical elite had a substantial role in creating the idea of the exclusively female witch. It is important, however, to understand that they were allowed to have this role largely because they were able to act on the foundation of
feminizing influences already in place. Clerical misogyny had always existed, but only in the mid-fifteenth century was it able to manifest itself in the creation of the female witch-stereotype. This was possible only because of the coming together of all of the factors described above. Among the most important figures to take advantage of the opportunity was Johannes Nider.

As mentioned earlier, Nider’s *Formicarius* did not insist that witches were exclusively women. However, Nider does make abundantly clear his opinion that women were more suited for the evils of witchcraft. The *Formicarius* first breaches the subject of women and witchcraft with a discussion of Joan of Arc, who had been burned in France just a few years prior. He uses Joan’s case as a stepping stone to approaching the larger issue of the inherent female susceptibility to sin. His argument was, in short, that women were cursed with physical, mental, and spiritual weakness, and that these weaknesses made them more vulnerable to the temptations of the devil. To support this argument he drew on standard biblical, patristic, and scholastic sources. The credibility of these sources was largely responsible for the influential status of the work as a whole, and it also led later writers to draw inspiration from his anti-woman perspective.38 The *Formicarius* was not the only influential text of Nider’s that had something to say on the matter. His *Praeceptorium* laid out what would become the three canonical reasons for women’s inclination toward superstitious practices. First, women were more credulous than men—a weakness that was, in Nider’s opinion, mercilessly exploited by the devil. Second, they were of more impressionable natures, which naturally made them more sensitive to influence. Third, they had “slippery tongues,” and for this reason they were more likely to spread what they had learned of magical arts to their fellow women. He also notes that because of their physical and emotional weaknesses, they were more likely to seek revenge through occult means. This point is of special significance because it directly links women’s alleged natural tendency toward superstition with *maleficium*. This helps to explain why Nider thought women were more prone to witchcraft. If women were naturally inclined toward superstition, it logically follows that they would be naturally inclined toward *maleficium*, and as such toward witchcraft.39

The connection between superstition and *maleficium* had been longstanding. Although today the word *superstition* carries implications of usually mundane eccentricity, this was not so in the late Middle Ages. Superstitious beliefs or practices were commonly listed alongside performance of harmful sorcery in medieval condemnations. The inquisitor Nicholas Eymeric, writing in 1376, called it “a vice opposed to the Christian religion or Christian worship,” and declared it heretical behavior in a Christian.40 The theology faculty of the University of Paris listed superstition alongside *maleficium* and the demonic pact in their public condemnation of all magic in 1398.41 In light of this, it is significant to note that Nider’s commentary did not initiate the association between women and superstition. Early medieval penitentials consistently singled out women as guilty of superstitious practices. With superstition being so directly associated with *maleficium*, it was no wonder that theorists like Nider found ways to use those traditions to inform their conceptions of witchcraft.42

As previously mentioned, the misogynistic principles of Nider and his *Formicarius* were greatly influential to later writers on witchcraft. The most significant of these writers to draw inspiration from Nider’s work was also the first whose treatment of witchcraft would grow to outshine the *Formicarius* in widespread authoritative influence. This writer was Dominican inquisitor Heinrich Institoris, and his text was the notorious *Malleus Maleficarum*.43 Written in 1487, Institoris’s extensive text—the title of which translates to “The Hammer of Witches”—was designed as an in-depth inquisitorial manual. It covers topics ranging from identifying witches and methods for
hunting and trying them, to the mechanical operation of their demonic magic and the variety of forms that magic could take. As an example of clerical misogyny the *Malleus* reigns supreme. Institoris rants at length on the weakness, sinfulness, and perfidy of women, devoting an entire chapter to the subject. Much like Nider, Institoris supports his position by assembling a formidable catalogue of ancient and contemporary authorities to testify to feminine weakness:  

Now the wickedness of women is spoken of in *Ecclesiasticus* xxv:

There is no head above the head of a serpent: and there is no wrath above the wrath of a woman. I had rather dwell with a lion and a dragon than to keep house with a wicked woman. And among much which in that place precedes and follows about a wicked woman, he concludes: All wickedness is but little to the wickedness of a woman. Wherefore S. John Chrysostom says on the text, It is not good to marry (*S. Matthew* xix): What else is woman but a foe to friendship, an unescapable punishment, a necessary evil, a natural temptation, a desirable calamity, a domestic danger, a delectable detriment, an evil of nature, painted with fair colours!

He sets out what amounts to a more elaborate description of Nider’s main arguments against women. Institoris, like Nider, describes women as “feebler both in mind and body,” and for this reason “it is not surprising that they should come more under the spell of witchcraft.” Such views were no doubt common for the time, but were nowhere else so aggressively linked with witchcraft. Institoris argued that all witchcraft could be traced to the same root as all characteristically female sin: carnal lust. After his list of complaints about the female character, he clearly states his answer to the question of why witches are necessarily women: “... the natural reason is that she is more carnal than a man, as is clear from her many carnal abominations.” And furthermore, “To conclude. All witchcraft comes from carnal lust, which is women insatiable.”

The primary innovation of the *Malleus* was this insistence that harmful magic belonged almost exclusively to women. Male magicians exist in Institoris’s text, but they are pointedly marginalized. Broedel suggests that perhaps the simplest explanation for this insistence (beyond the obvious misogyny, which, though clearly a powerful force in Institoris’s worldview, seems insufficient on its own) is to accept that it derives from his own experience as a witch-hunter. It would not be unreasonable to suppose that a majority—even a large majority—of accused witches in a given area could have been women. Institoris makes precisely this claim in the *Malleus*: “As for the first question, why a greater number of witches is found in the fragile feminine sex than among men; it is indeed a fact that it were idle to contradict, since it is accredited by actual experience, apart from the verbal testimony of credible witnesses.” Whatever the reasoning of its author, the *Malleus* proved to be incredibly successful. Acting on the foundations of its predecessors, and on the plethora of conditions which had paved the way for the idea of an exclusively female witchcraft mythology, the “Hammer of Witches” served as the final link in the chain of influences. Its widespread acceptance as the authoritative treatise on witchcraft assured the feminization of the clerical conception of witchcraft.

By the time the *Malleus* reached widespread readership, the stereotype of the female witch was becoming well established. The development of this stereotype over the course of the preceding centuries had been long and complex, and was now reaching its fruition. Conceptions of magic, once having favored the idea of masculine practitioners, had shifted to a feminized concept. The establishment of the witches’ sabbat as the definitive central element of the clerical concept of witchcraft was
perhaps the strongest force in pushing the stereotype across the gender boundary. Its construction from a combination of anti-heretical stereotypes and feminine mythological motifs created powerful imagery that could easily be interpreted as strongly accusatory toward women. Misogynist authorities like Johannes Nider and Heinrich Institoris responded in the predictable way, seizing their opportunity to promote the feminized stereotype and the persecution of women as witches.

In the second half of the fifteenth century, the rate of witchcraft trials increased greatly, often doubling figures from the first half. As Europe made the transition from the Middle Ages to the early modern period, the witch-hunting craze persisted, and convicted witches were burned well into the eighteenth century. An estimated 40,000 people were executed as witches between 1450 and 1750. Varying figures have been proposed for the exact percentages of male versus female convictions. It is clear that the vast majority of those executed for witchcraft were women, probably between 65 to 80 percent. Direct responsibility for this cannot reasonably be placed on any one group or sector of society. Although complicated social and economic factors within rural village populations likely had the most direct influence on the nature of the accusations themselves, the clerical conceptions of witchcraft must also have greatly exacerbated the overall tendency to associate witches with women. After all, as Kieckhefer has pointed out, local parish priests could easily serve as modes of transmission for such biases between the classes. And in the end it was the clerical authorities who carried out the trials and made the convictions. As has been noted by Bailey, if clerical conceptions of magic had not developed into a pointedly feminized stereotype, it seems unlikely that the witchcraft craze would have occurred in the way that it did. The ultimate irony, of course, lies in that very shift of conception. In earlier periods, clerical authorities were concerned primarily with masculine necromantic sorcery, the practice of which historical evidence has proven to have actually taken place. Persecution of these male practitioners was never pursued with the same fervor that was applied to the hunting of witches after the shift of clerical concerns. Witchcraft though, unlike necromancy, was an imaginary construct, and all evidence points toward the non-existence of any real satanic witch cult. As the witch-craze broke out across Europe and the learned elite developed their feminized concept of magic, thousands of women were burned for a crime that in all likelihood never existed.
Notes
1. Various forms of divination were among the most common magical practices in the classical Greek and Roman traditions. There were countless varieties of divinatory practices, most of which were elemental. Astrological divination and astral magic drew not only upon observation of material conditions in the heavens, but also on invocation of the elemental spirits who were thought to dwell there. The spirits of the dead were similarly employed for purposes of divination in classical necromancy. See Richard Kieckhefer, *Magic in the Middle Ages* (Cambridge: Cambridge University Press, 1989), 125–33, 152; Isidore of Seville, “Etymologies, Book VIII, Chapter 9,” in *Witchcraft in Europe, 400–1700: A Documentary History*, ed. Alan Charles Kors and Edward Peters (Philadelphia: University of Pennsylvania Press, 2001), 51.
6. Understanding of this terminology is essential to the entire issue of medieval magic. The primary meaning of *maleficium* had once been “evil deed,” but as early as the time of Tacitus it had been used to refer to sorcery and malign magic. In the texts and treatises of the later Middle Ages, *maleficium* usually referred to harmful sorcery or its effects, or, less commonly, it was used to denote a material object in which malign magical force resided. A *maleficus*, thus, was generally a person who knowingly produced *maleficium*. The key thing to understand is that these notions were broad and ill-defined. There was no one homogenous category of specific practices that uniformly qualified; rather, *maleficium* was an amalgamation of harmful conditions that could be linked with some event, individual, or motivation that was perceived as malicious. See Broedel, 131–33, 173.
8. Ibid., 62.
10. Here the *Episcopi* shows itself to be part of the *interpretatio Christiana*, the effort to combat pagan survivals by translating elements of pagan traditions into Christian theological terms, which would then be condemned within the Christian theological framework. The *Episcopi* labels the pagan goddess Diana and her ethereal attendants as demons and condemns those who would follow or even believe in their existence as devil-worshippers. See Richard Kieckhefer, *European Witch Trials: Their Foundations in Popular and Learned Culture, 1300–1500* (Berkeley: University of California Press, 1976), 39.
14. Bailey, 125; The rise of scholasticism at this same time seems to have encouraged an increase in translation and absorption of Arabic texts in areas like Sicily and Spain, where European scholars were in close contact with the Islamic world. Such classical, Hebrew, and even Asian occult and magical texts had already been translated into Arabic and maintained by Islamic scholars for hundreds of years. See Kieckhefer, *Magic in the Middle Ages*, 117–19.
15. On the original meaning of the term, Isidore of Seville said, “Necromancers are they by whose incantations the dead appear to revive and prophesy and answer questions. Nekros in Greek means dead, while manteia means divination.” See Isidore of Seville, “Etymologies,” 52. However, by the Middle Ages the meaning had substantially changed. Medieval theological writers assumed, in the tradition of Augustine, that the spirits of the dead could not really be conjured, and that the necromancers summoned demons who pretended to be spirits of the dead. As such, the term necromancy came, in the late medieval period, to refer to the explicit and intentional conjuring of demons. See Kieckhefer, *Magic in the Middle Ages*, 152.

18. Bailey, 125.

21. Frightening sacrifices were demanded from the witch by the devil to secure the pact. Animal sacrifices might be made, or the witch might be forced to promise one of his or her own limbs (to be collected after death). More disturbing still were the descriptions of witches offering up the bodies and souls of their firstborn children for ritual sacrifice, the remains being subsequently used to create magical powders and unguents. See Michael D. Bailey, “The Medieval Concept of the Witches’ Sabbath,” *Exemplaria* 8, no. 2 (1996): 429, 430; Claude Tholosan, “Ut magorum et maleficiorum errores (1436–37),” in *Witchcraft in Europe, 400–1700: A Documentary History*, ed. Alan Charles Kors and Edward Peters (Philadelphia: University of Pennsylvania Press, 2001), 164.

24. In reality the Waldensians, like many religious subgroups of the Middle Ages, started simply as a community whose members chose to live in voluntary poverty in emulation of the life of Christ. The Waldensians remained, doctrinally, quite close to Catholic dogma, but rejected the hierarchy of the Roman Catholic Church. Some of the outlandish accusations may have been inspired by a corruption of actual Waldensian practice. To hide from would-be persecutors, Waldensians did hold their meetings in secret, and the accusations of orgies in the dark may be corrupt exaggerations of their actual practice of ending these secret meetings with communal prayer in total darkness. See Norman Cohn, “The Demonization of Mediæval Heretics,” in *The Witchcraft Reader*, ed. Darren Oldridge (London: Routledge, 2002), 36–39, 42.

25. This black cat is meant to be the devil, or at least a demon representing the devil. The image of the devil appearing in animal form becomes common within these clichés, both in their application to heretics and to witches. The black cat is the most common animal form amongst these depictions.

27. Cohn argues that the roots of these types of accusations can be traced back considerably further, even to the time of early Christianity. He claims that similar defamation was used in a more rudimentary way by the Romans against early Christians. He also notes, however, that it would be misleading to portray all clerical and inquisitorial authorities who participated in persecutions based on these accusations as aware of their fictional nature. If the application of these stereotypes was a conscious act of slander, it was perpetrated by a select few. Most clerics and inquisitors (and even the popes) thoroughly believed in the reality of the accusations and in the justice of the persecutions. Cohn, 37, 47, 49.

28. Ibid., 43–45.

29. The conception of witchcraft not simply as scattered occurrences but as a defined sect was a natural and essential result of the sabbat mythology itself. The nature of the demonic assemblies implied a conscious collective, and this classification allowed for
easier application of anti-heretical stereotypes. Once witchcraft became a sect, it could be
classified as a heretical sect.

33. Martine Ostorero, “The Concept of the Witches’ Sabbath in the Alpine Region (1430–1440):
   Text and Context,” in *Witchcraft Mythologies and Persecutions*, ed. Gabor Klaniczay and
   Eva Pocs (Budapest: Ceu Press, 2008), 21–22, 27.
34. The name Diana suggests a Roman origin, although much of the tradition itself seems
   more similar to the “Wild Hunt” of Germanic legend. Its nature as an amalgam of various
   traditions is evidenced by the existence of various names used in different regions, Diana
   merely being the most popular amongst clerical authorities. The leading goddess was
   also known as Hilda, Berta, Perchta, or any of several others. This goddess would ride
   through the night on various beasts, attended by fairy-like female spirits, and would call
to sleeping women who would rise from their beds and come out to join the procession.
   These companies of women were often referred to as *bonae res*, because the original myths
   claimed the women brought good luck upon those who left gifts for them. See Broedel, 103;
   Russell, 660.
36. Ibid., 104–07.

43. The text is formally credited to Heinrich Institoris (also known as Heinrich Kramer, Institoris
   being the Latinized version) and his colleague James Sprenger, and the work was to some
   extent a collaboration of the two. Broedel (whose historical work focuses heavily on the
   Malleus) has claimed that it seems probable that Sprenger’s overall contribution was
   minimal. See Hans Peter Broedel, “To Preserve the Manly Form from so Vile a Crime:
   Ecclesiastical Anti-Sodomitic Rhetoric and the Gendering of Witchcraft in the Malleus

Bibliography

Theology, Psychology, and Politics: The Holy Trinity in Morrison’s *Beloved*

Nicole Selenka, author
Dr. Roberta S. Maguire, English and University Honors Program, faculty adviser

Nicole Selenka graduates in January 2012 with a degree in Secondary Education English and a minor in English as a Second Language.

Roberta S. Maguire, professor of English and director of the University Honors Program, earned her Ph.D. from the University of Maryland, College Park. At UW Oshkosh since 1997, Dr. Maguire teaches African American literature and culture courses, and her research focuses on African American modernism and jazz.

Abstract

This essay dissects the previously unstudied allusion to the Catholic Holy Trinity in Toni Morrison’s *Beloved* and explains how her purpose in using this allusion, like the Trinity itself, is threefold. Excerpts from the novel reveal how Morrison uses the Trinity to develop her three main characters and their relationships to each other, deepening *Beloved*’s already dense plot. Textual evidence for Morrison’s exploration of the reality, fear, and enormity of the enslaved experience is also presented, and how Morrison unites these specific psychologically damaging experiences into a singular commentary on post-Civil War African American consciousness through her trinity of characters is demonstrated. Further, the political climate of the 1980s is investigated and the assertion that Morrison uses her allusion to the Trinity to comment on the tacit reversion of civil rights at the hands of the neglectful Reagan Administration and Rehnquist Court is made. These three interdependent aspects of Morrison’s Trinity allusion are also used to illuminate *Beloved*’s hauntingly obscure closing message.

Introduction

In her 1987 Pulitzer Prize-winning novel *Beloved*, Toni Morrison takes up a remarkably diverse set of historical and cultural ideas and quilts them together into an affective narrative. Based on the historic tragedy of Margret Garner’s infanticidal response1 to the 1850 Fugitive Slave Act, Morrison’s story follows Sethe, a mother and escaped slave who murders her young daughter in a fit of mercy, madness, and love when the family’s capture and return to the plantation at Sweet Home seems imminent. Sethe and her surviving daughter, Denver, are haunted not only psychologically by the lingering reality of slavery as an institution but physically by the baby’s ghost itself. When a strange young woman named Beloved sweeps into their lives, these two haunting realities collide to create a multi-leveled, unique experience in historical fiction.

The novel follows Sethe, a free woman in post-Civil War Ohio, who fights to suppress the horrific memories of her enslaved life on the Sweet Home plantation in Kentucky and battles with the guilt of having killed her first-born daughter, whose violent ghost still haunts the family’s new home at 124 Bluestone Road. Denver, traumatized by the baby ghost and a product of the anxious environment her mother’s fear has fostered, becomes introspective and friendless, save for her mother and the baby ghost. Both women live in complacent isolation at 124 Bluestone Road until an old friend of Sethe’s from Sweet Home, a former slave named Paul D, arrives. Sethe and Paul D attempt to kindle a romantic relationship, but the baby ghost seethes with anger
at the intrusion and Paul D is forced to exorcise it from the house. He succeeds, but just as a hope for future happiness in familial love emerges for the three characters, a young woman appears on their doorstep. Sleepy, sickly, soaked with water, and able only to recollect her name, Beloved changes the course of Sethe, Denver, and Paul D’s lives immediately. The baby ghost incarnate and so much more, she challenges Paul D and Denver to delve into their respective pasts while ultimately forcing Sethe to confront her own.

Beloved is ornate, dense, and, like all of Toni Morrison’s fiction, it is as undeniably beautiful as it is socially and politically conscious. This essay will demonstrate how Morrison, through her allusion to the Catholic Holy Trinity, unites three separate psychological remnants of slavery into one cohesive commentary on African American consciousness, and explore how she uses this Trinitarian understanding to address the revision of civil rights implied by a negligent Reagan Administration and Rehnquist Court in the 1980s. The Trinitarian reading of Beloved, as an intellectually rewarding complement to studying the novel with the traditional postmodern trinity of race, class, and gender in mind, will also illuminate her evocative closing message that “this is not a story to pass on.”

**Literature Review**

Critical essays that speak to Toni Morrison’s use of Christianity, specifically biblical references, in her novels are numerous. Entire volumes of scholarship are dedicated to how these allusions function within Morrison’s fiction, and academics continue to study why she chooses to infuse her novels with Christian themes, imagery, and messages so consistently. In dealing exclusively with Beloved, however, this scholarship narrows. Morrison draws upon the vastness of the Western literary tradition and the richness of African culture to an extraordinary extent in this novel, and consequently the study of her tendency toward Christian allusions has seemingly fallen by the academic wayside in lieu of Beloved’s more politically profitable aesthetics.

Fortunately, several scholars do maintain that this post-modern slave narrative can and should be read with a critical eye for Christian allusions. The most notable research done with Beloved in this vein delves into how Morrison reworks scripture throughout the novel, modeling the trials and triumphs of her characters on the teachings and Passion of Jesus Christ. Research suggests that one of the narrative’s most pivotal moments incorporates biblical subtexts. The day before Sethe murders her “crawling already?” baby, Baby Suggs accepts two buckets of donated blackberries and intending to only make a couple of pies for her growing family, she inadvertently initiates a feast for the town’s entire black community. This banquet, created from nearly nothing, is as reminiscent of Jesus feeding the multitude from five loaves and two fishes as it is symbolic of the Last Supper, the sumptuous Passover meal Jesus took part in the night before his brutal death. The community’s delight in Baby Suggs’ generous feast soon turns to disgust in its frivolous excess, and it is this envious reaction to the meal that sets the mechanism for “crawling already?” baby’s death and Sethe’s ostracism in motion. The community, resentful of Baby Suggs for hosting the celebration “that put Christmas to shame,” failed to give a warning cry when a slave-catching posse, the “four horsemen” bearing Sethe’s apocalypse, came into town. Biblical subtext can also be inferred from the reverberations of “crawling already?” baby’s murder. Sethe acts as Cain did after murdering Abel by refusing to acknowledge the human implications of killing her child, and as a result she is unwilling and unable to properly mourn her child.

Morrison also weaves the Gospel into Sethe’s anguished journey to freedom in Ohio. In Morrison’s retelling of Jesus’ Good Samaritan parable, Sethe, starving and
in labor, collapses in the woods to die when Amy Denver, a white indentured servant making her own bid for freedom, happens upon her. Ignoring race-based societal demarcations, Amy Denver not only nurses Sethe back to travelling condition but helps deliver the baby, her namesake, as well.9 In this same vignette, Amy discovers Sethe’s whip-torn back, a weeping wound she likens to a chokecherry tree, and this symbol of debasement hardens into the tree-shaped scar Sethe will bear upon her back for of the sins of slavery10 just as Christ bore a literal tree upon his back for the collective sins of the world.11

Scholars frequently touch upon Baby Suggs’ preaching in their essays as well, searching for Morrison’s meaning in the spiritual ministry Sethe’s mother-in-law performs, “unchurched,”12 for the newly freed black community in Ohio. Whether or not Morrison’s intentions in designating a woman a preacher were iconoclastic,13 Baby Suggs’ message of a human love untainted by the hatred and scorn of a white slave-holding society and her assertion that “the only grace they could have was the grace that they could imagine”14 is undeniably Christian.15 Morrison also references Jesus’ public life and his mission as a healer in Baby Suggs; through her ministry, which gives a people who had never owned an object in their life, least of all their selves, the “spiritual space to claim the Self, which is the God-Spirit that links them to their human selves and to one another” she becomes like Christ, a healer of the masses.16

However, for all of the research into the biblical allusions Morrison includes in Beloved, only one brief mention17 is made of the hermeneutics concerning the powerful ties between Sethe, Denver, and Beloved that drive the novel’s plot. Therefore, this essay seeks to fully expose the aesthetics of the Holy Trinity alive in Morrison’s Beloved and illustrate how even a basic understanding of this theological concept can greatly enhance readers’ understanding of Morrison’s characters’ complex relationships. Moreover, because Morrison declares her authorial sensibility at once “highly political and passionately aesthetic,”18 this essay will also demonstrate how the author uses her allusion to the Holy Trinity to comment on African American consciousness and subsequently suggest that she uses this commentary to address the political climate of the 1980s, the era in which Beloved was written.

Theology, Toni Morrison, and African American Tradition

Denominational conceptions of the Trinity differ, and there are several ways this symbol can be portrayed in fiction depending on which religious doctrine the author identifies with. Perhaps previous research has skirted Morrison’s allusion to the Trinity due to the ambiguous nature of this dogmatic principle and the idea that Morrison’s legitimate association with a specific strain of religious faith must be established in order to discuss her use of the Holy Trinity in Beloved. In a 2004 interview with New York University’s Antonio Monda, Morrison explains how her connection to Roman Catholicism started in early childhood. She received a Catholic education, and in these formative years she was “fascinated by the rituals of Catholicism.”19 Therefore, her understanding of the Bible and the Holy Trinity must be as firmly rooted in Catholicism as she once was. Though she left the Church after a crisis of faith in the wake of Vatican II,20 Morrison’s thorough comprehension of the complex concept of the Holy Trinity, particularly the Catholic concept of it, is palpable as she taps into this threefold unity to build an equally intricate relationship between her characters Sethe, Denver, and Beloved.

The Catholic Trinity is a literal representation of God in three persons; no subordination of its individual parts is implied, and it is not simply the metaphorical application of a trifold symbol. According to the Catechism of the Catholic Church, “the three divine Persons are only one God because each of them equally possesses the fullness
of the one and indivisible divine nature.”21 This is the conception of the Holy Trinity that Morrison uses in her novel: she applies the richness of her characters over the framework of these three expressions of God that are all equally, at once, and always one God. A basic understanding of this illogical mystery of faith is necessary to fully appreciate the way in which Morrison references it, and theologian Fr. Leonard Feeney provides a concise explanation with water as his example: liquid water, mineral ice, and water vapor are all at once water. They are never anything but formula H\textsubscript{2}O, and their separate forms are but varied expressions of an identical substance, just as the Father, the Son, and the Holy Spirit are separate selves natural to one entity.22 Morrison takes this concept and applies it to Sethe, Denver, and Beloved with deliberate dexterity, and through this allusion she creates characters that are intertwined.

This is not to say that Morrison takes the Catholic Holy Trinity and inserts it point-blank into her novel with little or no adjustment; her penchant for wedding established literary symbols to African American culture does not allow such a concise explanation. Her simple adoption of the Trinity, in itself, is an ode to the African American tradition. Just as early African American slaves embraced the Christianity offered to them and found room within it to make it their own,23 Morrison finds room within the Trinity to make this Christian icon hers. When this allusion to trifold unity climaxes, near the end of section two, in the chapter24 that begins “I am Beloved and she is mine,” where all three characters’ consciousnesses are completely interwoven, Morrison’s prose takes on such a halting, staccato beat that readers can actually feel her reference to African tribal drums: 25

\begin{verbatim}
Beloved
You are my sister
You are my daughter
You are my face; you are me
I have found you again; you have come back to me
You are my Beloved
You are mine
\end{verbatim}

Moreover, her decision to transform the established patrilineal structure of this relationship into an equally potent matrilineal arrangement also signals a direct reference to African culture,27 as Africa has “been home to some of the world’s only matriarchal societies.”28

**The Aesthetics of Morrison’s Beloved Trinity**

Within this trinity, Sethe, the matriarch, is the Creator; her ownership of the world she made possible for her children by fleeing Sweet Home and escaping to Ohio is unquestioned, particularly when she explains the “miracle” of it to Paul D: “I birthed them and I got em out and it wasn’t no accident. I did that . . . me using my own head.”29 Furthermore, when she attempts to put her emotions during this exodus into words, Sethe uses phrases that establish her as a source of creation and divine love for her children: “But it was more than that. It was a kind of selfishness I never knew nothing about. It felt good. Good and right. I was big, Paul D, and deep and wide and when I stretched out my arms all my children could get in between.”30 With Mother as Creator, Morrison then slides Beloved, the reincarnation of Sethe’s sacrificial child, into this feminine trinity as the Daughter.

Sethe forfeits her child, an infant known only as the “crawling already?”31 baby, for the salvation of the world she has created for her children; when she sees her master coming through the gate to reclaim her family, his property, she executes her first-born daughter to save them all. “My plan was to take us all to the other side where
my own ma’am is,”32 she confesses, but she did not have to destroy her remaining children because Beloved’s blood sacrifice was all that was needed. In slitting her infant daughter’s throat to save the innocent child from a life of dehumanization, Sethe so horrified the family’s would-be captors that they left her and her surviving children to the authorities, certain that the same “mishandling” that spurred their flight from Sweet Home had caused them to revert to what their former master termed “the cannibal life they preferred.”33 Morrison then references another Catholic tradition, the Eucharist,34 to cement Beloved as a Christ figure when Denver “swallowed her [crawling already? baby’s] blood right along with her mother’s milk.”35

Denver, as the Holy Spirit, “proceeds”36 from the Mother and the Daughter, as she is utterly dependent on both to define her. In terms of the Holy Trinity, this article of faith is difficult to define; even the Catechism is vague, stating only that “The Father generates the Son; the Son is generated by the Father; the Holy Spirit proceeds from the Father and the Son.”37 The two imperative concepts here are that the Holy Spirit proceeds from the Father and the Son equally, and that a double procession is required for the Trinity to function.38 Ironically, in this case the novel actually clarifies the allusion. When Sethe kills the “crawling already?” baby, she generates a baby ghost who, ever present, defines Denver’s existence as much as her flesh and blood mother does. Therefore, Denver progresses, or “proceeds” twice, both hereditarily from Sethe and experientially from Beloved, who is the “crawling already?” baby ghost incarnate.

Sethe and Beloved also hold equal sway over Denver’s heart and mind; Denver explains early on that her two older brothers’ terrified exodus from the possessed house, the death of her revered grandmother Baby Suggs, and the fact that no one in the black community dared set foot on even the porch of their house at 124 Bluestone Road after Sethe deliberately murdered the “crawling already?” baby are insignificant episodes “as long as her mother did not look away,”39 a sentiment that speaks to the power of their relationship in the face of Denver’s adolescent loneliness. Denver’s connection to Beloved is equally intense; unlike her mother, she recognizes her ghostly sister reincarnate in Beloved immediately. Their relationship, born of Denver’s fervent desire to care for Beloved when she arrives on their doorstep nearly incapacitated from the weight of the living world and amplified by her commitment to protect her if Sethe’s murderous tendencies resurface, evolves into something truly spiritual.

An immortal phantom in an earthly body, Beloved is capable of acting beyond her human faculties: she can lift furniture with one hand, insinuate herself into the hearts and minds of the living to incite discomfort or fear, and she can appear from nothing.40 Denver, as a human girl, obviously cannot logically behave this way, but when Beloved, in a fit of happiness, dances around the room one afternoon and urges her sister to join her, Morrison grants the ethereal qualities ordinarily reserved for Beloved to Denver, who “grew ice-cold as she rose from the bed. She knew she was twice Beloved’s size but she floated up, cold and light as a snowflake.”41 Levitating from the bed to join her sister in a divine dance, Denver succumbs to a “dizziness, or feeling light and icy at once”42 while bouncing round the room and collapses into laughter with her long-lost sister. This melding, the physical dance that allows Denver to momentarily take Beloved’s spectral nature, is accentuated by a conversation they begin that is nothing if not otherworldly—a storytelling session that expressively unites Denver and Beloved to Sethe in one mind.

In the pages that follow, Morrison solidifies her allusion to the Trinity, the deep-seated interconnectivity that defies logic. As Denver begins to recount the story of her birth to Beloved, “the monologue became, in fact, a duet” and the two girls become one, the quilt they are lying on begins “smelling like grass and feeling like hands,” and the quiet room drops out from around them.43 Suddenly, out of a mere desire to
verbally recreate something “only Sethe knew because she alone had the mind for it”44 they actually create it; together as one, they become intermingled with Sethe’s consciousness, and readers are privy to the thorough, direct account of Denver’s birth as told, improbably, by two characters who simply could not relate this episode in such cinematic detail. By flowing naturally from the reality of Denver and Beloved’s storytelling into the eight-page, firsthand reality of Sethe’s labor and delivery, Morrison fortifies her allusion to the Trinity with the complex relationship these three characters share. Sethe, Denver, and Beloved are at once three separate entities, united intrinsically with each other as one collective mind. When each character’s particular, historical symbolism in Morrison’s trinity is accounted for, these multi-leveled experiences coalesce and American slavery emerges as their horrific common denominator. The three are so expertly intertwined that the totality of their interrelationship creates not only excellent fiction, but an insightful psychological statement: though free in body and conscious thought, the African American mind remains unconsciously tied to and irrevocably damaged by the American institution of race-based slavery.

The Threefold Psychology of Slavery
Throughout Beloved, all three characters come to represent three distinct vestiges of slavery that plagued the newly freed African American mind. Like the components of the Holy Trinity combined define one God, the reality, the fear, and the enormity of the enslaved experience are distinct in their respective incarnations yet correspond harmoniously as a singular, indivisible presence in post-Civil War African American consciousness. Sethe, as the aforementioned allusion to God the Father, is by her very nature omnipresent, caught in an eternal “now.” Though she spends the majority of her freedom working hard to “remember as close to nothing as was safe”45 about her life in bondage, she lives in constant fear that the sound of a twig snapping or some other common occurrence will send her into a raw reverie where “suddenly there was Sweet Home rolling, rolling, rolling out before her eyes.”46 Though freed legally, Sethe still lives life enslaved by her memory; for her, as for the Creator, past, present, and future meld into eternity and therefore time fails to heal the wounds inflicted upon her at Sweet Home. Sethe’s character becomes Morrison’s symbol for the brutal reality of slavery; inundated with painful, repressed memories, she never ceases to perceive enslavement as an imminent threat. As a result, Sethe’s drive to protect her family from dehumanization never diminishes. Even in her private musings about her blossoming romantic relationship with Paul D, a happy occurrence that might offer her hope for the future and an escape from the past, she resolutely declares that “As for Denver, the job Sethe had of keeping her from the past that was still waiting for her was all that mattered.”47

Consequently, Denver, who had never known the pain and trial of slavery directly, is also imprisoned by this same unspeakable past her mother eludes daily. Like the Holy Spirit’s function within the Trinity is to evidence the existence of God the Father and Christ the Son,48 Denver’s character is bound to bear witness to the reality of Sethe and Beloved. She is a product of the environment they create and she must proceed from them. However, Sethe’s aversion to talking about the painful memories she is composed of, Beloved’s mute presence as the belligerent baby ghost, and the ephemeral nature of the dialogue Beloved is able to maintain as a human leaves Denver at a disadvantage. Knowing not to press her mother for information she is unwilling to share, Denver remains concerned with Sethe’s memories only as far back as her own birth and consciously cuts herself off from understanding the obscure and frightening history that silenced her mother.49 Unable to gather enough details about Sethe or Beloved to function as she should within the Trinity allusion, Denver stagnates. Power-
less even to leave her house, she becomes paralyzed by the “out there where there were places in which things so bad had happened that when you went near them it would happen again” mindset her mother’s fear and Beloved’s presence has fostered. A testament to the only sentiments she knows and tormented by the terrifying residue of slavery that sticks to the periphery of her free-born life, Denver’s character becomes a symbol for abject avoidance of the past and haunting, distilled fear.

Beloved is this haunting; she is the embodiment of the enslaved experience. Just as the inconceivable power of God became man in Jesus Christ, the psychologically crippling immensity of slavery becomes human in Beloved. Aside from quite literally haunting the women of 124 Bluestone Road, she gathers in the collective soul of the “Sixty Million and more” to whom this book is dedicated. Through time-bending stream-of-consciousness, Morrison’s prose develops a wide range of experiences in Beloved, from the little girl crouching in the hold of a ship on the Middle Passage to the ill-treated little girl serving a lecherous man’s food. These perpetual voices Beloved contains are all enslaved, all aching to be heard, and when Beloved manifests herself as a reality in Sethe and Denver’s life, they are all too much to handle. These three consciousnesses—the lingering reality of American slavery, the fearful avoidance of this reality, and the gravity of enslavement as a whole—make up the collective consciousness of the post-Civil War African American community. Morrison’s allusion to the Trinity is upheld here, though in a decidedly godless manifestation, as all three mindsets are again equal, inseparable components of the African American experience in the 1870s.

The Hazard of Trinitarian Discord

The perfect balance of these three components is as intrinsic to the well-being of the African American community as the synchronization of the Father, Son, and Holy Spirit are to the composition of God. If Sethe were to reign alone, in terms of her psychological symbolism, the African American community would give under the crushing weight of a life enslaved and face destruction by capitulation. If Denver and her psychology ruled, African Americans would live in fear of the free world and a listless demise brought on by the inability to succeed in freedom would follow. If Beloved’s psychology were allowed supremacy, the immensity of slavery as an institution would overwhelm free life and the African American mind would be dominated and defined by enslavement. No one component of either trinity can be allowed to overpower the others.

Morrison understands this Trinitarian equilibrium, as evidenced by Sethe, Denver, and Beloved’s sweet and harmonious relationship at the novel’s outset. Upon discovering that Beloved is her “crawling already?” baby come back to life, Sethe sets out to give her all of the childhood experiences, attention, and familial love she could have ever wanted. But Sethe’s eagerness to please her daughter soon borders on insanity: preoccupied with placating Beloved, Sethe loses her job and does not seek another. Sethe throws herself into her family with newfound, fanatic ferocity. She spends their meager life savings on fancy food and dress and as their stores begin to dwindle, Beloved’s demands for attention grow stronger. What begins as a guilt-ridden mother’s second chance to prove her love for her daughter turns into an upheaval of the family structure, and Denver observes the gravity of this imbalance with remarkable clarity: “Now it was obvious that her mother could die and leave them both. . . . Whatever was happening, it only worked with three—not two.”

Morrison destroys her trinity with imbalance, and the Catholic Trinity would be similarly destroyed if the unique relationship between the Father, Son, and Holy Spirit were misunderstood. The degradation of Morrison’s trinity is marked by Sethe’s
motion to “cut Denver out completely” from their fervent mother-daughter bonding and the confusion of both Sethe’s and Beloved’s roles in the relationship. Beloved adopts Sethe’s mannerisms, speech patterns, and dress until “it was difficult for Denver to tell who was who,” and their roles completely reverse when commands from Beloved eventually garner only apologies and groveling from Sethe. The damage this division and disparity within the Trinity would do to the Catholic conception of God is unthinkable, as doctrine clearly states the Father, Son, and Holy Spirit are as inseparable in their one substance as they are in their purpose: “the Trinity has one operation, sole and the same.” But the real devastation to Morrison’s trinity occurs when “the mood changed and the arguments began.” The delicate, mystical trifold relationship the three held, which previously allowed them a short-lived respite from a savage past, is upset when Sethe allows a domineering Beloved to relegate her to servitude, and history repeats itself. In terms of the Holy Trinity, this power struggle is inconceivable, but Morrison uses this implication to exaggerate the severity of Sethe’s situation: by distorting the balanced power intrinsic to the three-as-one structure, by obliterating the absolute harmony that composes God, God could, in effect, cease to exist.

The petrifying past Sethe has held at bay comes barreling down on her, both literally when she becomes a slave to Beloved’s whims and figuratively when Beloved’s aforementioned symbolic meaning is considered. On the literal level, Sethe is relieved that with Beloved she does not need to directly confront her past, as the “crawling already?” baby ghost knows all there is to tell, but her obsession with and subsequent bowing to Beloved as Morrison’s metaphoric embodiment of the enslaved experience allows Sethe to be swept away into her memories, memories that begin to erode her. Emboldened by her mother’s plight, Denver overcomes the fear instilled in her and sets out for help, but Sethe steadily wanes as Beloved waxes into a pregnant glory, feeding on unspoken misery. Sethe’s physical collapse is imminent until the previously aloof black community, witnessing Denver’s desperation and heeding gossip of the “grown-up evil sitting at the table with a grudge” at 124 Bluestone Road, unites to banish Beloved with prayer. This “amplified trinity” of 30 faithful women checks Beloved’s power and in doing so, sets Morrison’s trinity aright.

With this drama modeled on the hypothetical collapse of the Holy Trinity, Morrison outlines the repercussions of allowing the searing memories of slavery as a whole to cauterize the budding hope for future happiness in those who survived its terror. Though Morrison wrote this tragedy and trinity of characters with an eye for the past, she also did so with an ear to the present; the closing statement that “this was not a story to pass on,” and her urging to acknowledge history with prudence lest it repeat itself, was as important to the African American community in the late 1980s as it was in the 1870s.

Morrison’s Exorcism of 1980s Politics

In the 1980s, the Reagan Administration and the Rehnquist Court were the embodiment of African America’s most deeply rooted anxieties, a new Beloved; they were a powerful, political, and legally potent force for the reversion of civil rights. According to Robert L. Carter, U.S. District Court judge and civil rights advocate, the 1980s marked the most drastic adjustment in America’s approach toward race relations since Brown v. Board of Education in the 1950s. But contrary to Brown, this alteration in attitude was to the detriment of the African American community. The steady thrum of progress that had sustained the Civil Rights movement through desegregation, bussing, and affirmative action was fading; both the federal court system and the American public seemed destined to revert to their pre-Civil Rights racial bias. The “overt manifestations” of racism were gone, but the sentiment remained, evidenced by
the persistent *de facto* segregation of cities across the country and combined with a rise in hate crimes among adolescent Americans, racial tension punctuated the decade. Of New York City in the late 1980s, Carter said, “I feel as vulnerable and exposed to physical danger because of the color of my skin as I felt in rural Mississippi. . . . or Georgia in the 1940s, 1950s, and 1960s.”

Even as it seemed Civil Rights would meet its end by being systematically dismantled from the bottom up, it was also on the verge of being picked apart from the top down. The conservative Reagan Administration did not seem to believe that government intervention was the proper tool for the advancement of minority populations. This mind-set limited the courts’ role in maintaining the hard-won legal gains that four decades of Civil Rights activism produced, and because most African American scholars, lawyers, and judges considered further racial reform impossible by any means but “through law,” they perceived this lack of government concern as a death-blow to racial equality. This decade of renewed racial tension and languishing government support for civil rights was the climate that produced *Beloved*, and when Morrison’s trinity of characters and the separate traces of slavery they each symbolize are viewed in light of 1980s politics, her message that “this is not a story to pass on” reverberates with sobering effects.

The heaviness of this statement is evidenced by Morrison’s trinity and the way in which her characters’ respective symbolic implications for African American identity, their types, remain the same in the 1980s despite years of litigation. As in the 1870s, Sethe is still a newly freed woman. She fights to forget hardships of growing up black in America, but having been raised within the humiliation of segregation, the bitter sting of *de jure* discrimination still haunts her daily life. She seals her mind in the present, and while thinking of the steady march toward racial equality, of the victories won, and of the new life she has made possible for her children, she keeps the past at a distance. Then a news story, some random act of racial violence, sends her falling, falling back into the open, waiting arms of Jim Crow. The historical chapters pertaining to the fight for civil rights in the 1950s and 1960s remain integral parts of modern African American identity, and while succeeding generations are effectively removed from them, as Denver was removed from slavery, they still exact presence in African American thought in the 1980s.

A 1980s Beloved, ever the specter of slavery, has taken on many new victims’ voices since the 1870s, but she still signifies the breadth of the African American experience in this new trinity. She haunts 1980s African American consciousness as she did the women’s house at 124 Bluestone Road: as a sad, ever-present companion with an inclination to make her presence known when she feels she’s being forgotten. In the novel, Beloved materializes then Paul D exorcises her as “crawling already?” baby ghost from 124 Bluestone Road, and it is when this new Beloved is evicted from the community’s thought in the 1970s, when the Civil Rights movement finally yielded a “semblance of racial justice,” that she manifests herself and becomes a problem by the 1980s for the contemporary equivalents of Sethe and Denver.

When the past comes back to destroy a contemporary Sethe and her hope for any further racial reform, Morrison’s Trinitarian narrative becomes a warning. If 1980s African America follows Sethe’s lead and her symbolic psychological meaning, if they give in to the weight of mounting public and courtroom pressure, if they fail to protect their advances at this crucial post-Civil Rights movement moment, then they will be forced to relinquish those rights and become slaves anew under retrograde politics. With civil rights deteriorating in front of their eyes, the new generation must, as Denver did in the novel, go out into the world and seek help. The young need to advocate, as their parents and grandparents did, for the rights they have now and look boldly into
the past, regardless of its horrors, to appreciate how they got them. Finally, the only way to exorcise the past is to collect as a community and, in the verbal recognition of this blatant evil, force it back to the periphery of consciousness where it belongs. With her simple closing phrase, “this is not a story to pass on,” Morrison both encourages and cautions readers; she urges them to explore, but staunchly resist, the pull of the past. None of the dehumanizing chapters of the African American experience are aspects to “pass on” or ignore because they are too horrific to investigate, but historical terrors should never be allowed to “pass on,” or become so psychologically ever-present that they exert power over present generations.

Morrison’s skill in employing the Trinity allusion to illustrate the multifaceted anguish of a newly freed community in the wake of slavery’s terrors amplifies not only the experience of African Americans in the 1870s, but the modern African American experience during the semi-recent setback to racial equality in the 1980s as well. African American identity, via her allusion to the Trinity, emerges as a complex and powerful combination of harsh recurring memories, a sorrowful distant past, and struggles to forget what ought to never truly be forgotten. Her allusion also intensifies the duality and import of Beloved’s closing message, in that all of these individual aspects, as coequal, coeternal, and copowerful, deserve study and understanding. But, as Morrison points out, a balance must exist among them for the continual success of the African American community.

Notes
1. Margret Garner, wife and mother of four, escaped from slavery with her family by fleeing to Southern Ohio in 1865. When the family’s former owner arrived to reclaim his “property,” Margret was unable to bear the thought of her children living their lives in bondage. Feeling death was preferable to a life enslaved, she murdered her young daughter with a butcher knife. She attempted to kill her remaining children as well, but did not succeed. The Pursuit of True Freedom: School Desegregation in Racine, Wisconsin

Chris Tempas, author
Dr. Stephen Kercher, History, faculty adviser

Chris Tempas graduated from UW Oshkosh in May 2011 with a degree in history. His research began as a paper in a seminar on civil rights in Wisconsin during the fall semester of his senior year.

Dr. Stephen Kercher is an associate professor of history. He has been teaching twentieth century U.S. history at UW Oshkosh since 2000. His current research focuses on black student protest at Wisconsin colleges and universities in the 1960s.

Abstract
Throughout its existence, the United States had been inundated by racial conflict. Following the 1954 Supreme Court ruling on Brown v. Board of Education of Topeka, school segregation became one of the most controversial racial issues in our country. In the North, where de facto segregation ruled supreme, integrating public schools proved to be an especially arduous task. Racine, Wisconsin, was a typical Northern city in many regards. However, due to outstanding community support and extraordinary leadership, particularly from the National Association for the Advancement of Colored People (NAACP) and its president Julian Thomas, the Racine Unified School District triumphed over segregation. Because of its successful implementation of school desegregation, Racine became a model for racial accord for the rest of the country.

“Glory, glory, hallelujah!” was the cheer that echoed throughout the streets of Racine, Wisconsin, on a cold spring day in 1854, when more than 100 Racine men, in response to a “Revere-like summons” issued by crusading newspaper editor Sherman Booth, defied the injustice of racial prejudice and secured freedom for a fellow man. The man, Joshua Glover, was a runaway slave who had escaped from his master’s custody in St. Louis two years earlier. Glover was living in Racine and working at a local sawmill in 1854 when he was tracked down by agents of his owner, captured, and arrested under the Fugitive Slave Act. Taken aback by his unjust incarceration, a mob of more than 100 Racine anti-slavery activists led by Booth took the next steamer to Milwaukee, where Glover was being held. The crowd of angry Racine residents broke down the jailhouse door and freed Glover, allowing him to escape to Canada and reclaim what they believed to be his “indefensible right” to freedom.¹ This event spread anti-slavery sentiment across the state, leading the Wisconsin Supreme Court to shock the nation by making Wisconsin the first state to declare the Fugitive Slave Laws unconstitutional. During the tumultuous decade that preceded the Civil War, Glover’s emancipation inspired abolitionists across the nation to view Racine as a model for racial accord.

During the middle of the next century, another period of turmoil enveloped the United States. In a country torn apart by racial issues, few generated more controversy than school segregation. Yet, just as the Racine community had bonded together to liberate Joshua Glover from his unjust imprisonment, it again proved exemplary in its successful liberation of African Americans from the injustice of segregated schools.
In 1975, after a decade-long struggle to desegregate its schools, America would once more look to Racine as a “model for the nation.”

One hundred years after Joshua Glover earned nationwide celebrity, the United States Supreme Court ruled, in *Brown v. Board of Education of Topeka*, that “separate educational facilities are inherently unequal.” This landmark ruling was intended to end the practice of segregated education in the United States. Yet in the years that followed, segregation was still in full bloom in many cities outside of the South.

Prior to the 1954 *Brown* ruling, Southern-style school segregation was fairly simple—African Americans went to “colored” schools; whites went to white schools. Although far from easy, this made the desegregation of schools in the South a more straightforward undertaking. However, in most Northern communities, geography, not skin color, was the primary cause of racial segregation. Because racial segregation was fundamentally intertwined with residential segregation, desegregating schools in the North would prove to be a much more complex and arduous task. Despite supporting school desegregation in principle—a 1963 poll discovered that 75 percent approved of the *Brown* decision—Northern whites opposed it in practice, arguing against the disruption of what they believed to be “the natural order of things.” According to historian Thomas Sugrue, “the debate over race and education in the North came to hinge on” one major notion, “the neighborhood school.”

In 1962, *Time* magazine called the neighborhood school “a concept as American as apple pie,” but to most African Americans it was not nearly as appetizing. Even in the absence of officially separate schools, Northern whites used their freedom in the housing market to produce public schools that were nearly as segregated as those in the South. And these same Northern whites who professed their approval of desegregation fiercely defended the separateness of neighborhood schools. But schools attended predominantly by African American children were not equal to schools attended predominantly by white children. “Separate” really did not mean “equal.” Francis Keppel, U.S. Commissioner of Education, addressed this point in a 1964 speech: “Whether it exists by law or custom, by edict or by tradition, by patterns of employment or patterns of housing, segregation hurts our children, Negro and white alike. And nowhere is this damage more devastating than in education.”

In Racine, like in other parts of the country, damage was being done. At the time of the *Brown* decision, racial segregation was relatively new to Racine County. It had always been a diverse area; Danish, Polish, German, and Czech immigrants made Racine a “melting pot” of sorts. Yet as late as 1940 this “melting pot” was distinctively white. The 1940 U.S. Census reported that only 432 out of the total 67,195 residents of Racine were “black”—less than 1 percent of the population. As in many Northern cities however, the onset of World War II created a demand for African American workers in Racine. By 1960, Racine County’s African American population had grown tenfold, becoming a significant segment in the community. And like in other Northern cities, the impact of this rapid minority population growth was amplified as a result of housing patterns and the compression of minority populations into concentrated neighborhoods. While newer schools in the suburbs were populated almost exclusively by white children, the minority student population was disproportionately concentrated in older, rundown, inner-city schools. According to the Racine Unified School District, by 1963, 73 percent of black pupils lived in an inner-city area that represented about four square miles out the 100 square mile district.

Even though de facto segregation persisted in the North, it was coming under scrutiny as a destructive mechanism for African Americans, especially in schools. In the early 1960s, as the centennial anniversary of the Emancipation Proclamation approached, many African Americans saw de facto segregation as the primary culprit.
for the substantial gap in affluence, status, and power between themselves and whites.\textsuperscript{10} Nowhere was this gap more prevalent than in the public schools of cities in the North. Many, like the Reverend Charles H. Smith, member of the Board of Directors for the National Association for the Advancement of Colored People (NAACP), were quick to point out the connection between unequal educational opportunities and inferior economic progress. As Smith saw it, de facto segregation not only denied African American children equal educational opportunities, but prevented them from attaining “the real freedom to which [blacks] have a right.”\textsuperscript{11}

Throughout the 1960s, as this “real freedom” still eluded many in Racine, the NAACP was widely considered what the \textit{Racine Journal-Times} in 1970 would call “the major, if not the only, spokesman for the cause of equality for minority citizens” in the area. Although the local NAACP’s success hinged on much more than just one person, no individual was more important to achieving racial equality in Racine than Julian Thomas.\textsuperscript{12}

A 1952 graduate (and Hall of Fame inductee) of Racine’s Washington Park High School, Thomas was hired as a factory worker at J.I. Case Company. At J.I. Case, Thomas worked hard and quickly rose to become an executive—no small feat for a black man at the time. He was elected president of the Racine NAACP in 1964 and would remain in that position for the next 22 years. Thomas served as president of the Wisconsin NAACP and as chairman of the seven-state region of the NAACP. He was also involved in numerous organizations, boards, and committees in the Racine community.\textsuperscript{13}

Thomas’s considerable public influence was inspired by his ability to inspire trust and respect among all races. His steadfast and logical leadership would prove to be the cornerstone upon which racial integration in Racine was built. But in the mid-1960s, his goal of achieving racial integration was not shared by most citizens of Racine, white or black. Thomas realized that before Racine could overcome desegregation, he had to substantially augment awareness and interest in racial issues. In describing Thomas’s struggle, Keith Mack, an administrator at Lakeside School in Racine, drew on a quote from Dante: “The hottest places in hell are reserved for those who in time of moral crisis maintain their neutrality.”\textsuperscript{14} Mack sensed that Thomas saw a moral crisis at the heart of de facto segregation of Racine schools. Thomas resolved to move people from every segment of Racine’s diverse community away from the position of neutrality to take a stand with him.

Thomas was not the only activist who attempted to awaken Racine’s African American community to the challenges of desegregation. At the 1965 Racine NAACP annual banquet, Edwin C. Berry, executive director of the Chicago Urban League, challenged Racine African Americans to accept the “responsibility to become involved . . . to see that your children get an education.” Without education, he said, a black child “can’t make it in the modern world.” Like Thomas, Berry knew that active involvement was the only way to escape what he called “the cultural castration” that had befallen the American Negro. “We aren’t going to lick this thing by hiding,” he said.\textsuperscript{15}

In the Jim Crow South, many whites employed blatant racism in order to keep African Americans in hiding. Although racism was tame in Racine compared to other parts of the country, some overt racism still persisted, particularly in the public school system. This came as a shock to many, including NAACP Education Director June Shagaloff. Since 1950, Shagaloff played a critical role in fighting school segregation throughout the United States. While she had witnessed a great deal of racism throughout her career as a civil rights activist, prior to her visit to Racine, Shagaloff said she “had always believed that racial prejudice was less in a northern state like
Wisconsin.” But Shagaloff was appalled when she saw the Confederate flag flying high over Racine’s William Horlick High School in April 1965. After seeing the flag, which she said symbolized “a history of slavery, bigotry, and prejudice” used at a public high school, she was no longer surprised at Racine’s “unwillingness to recognize de facto segregation in its school system.”

Thomas felt that school segregation in Racine was not as much the result of racism but of apathy. Like many Northern whites, most white citizens of Racine were simply indifferent to the plight of the American Negro. According to Scott Johnson, a Racine student in the 1960s, segregation was simply “not acknowledged” by whites. Moreover, some Racine residents even put an optimistic spin on segregation, citing the “advantage” of neighborhood schools. Johnson’s recollection of white sentiment in Racine was echoed by experts like June Shagaloff. The “fact that too many people in Racine feel there is no problem,” she declared, was the major reason for the racial problems in the Racine Unified School District. Even the school district itself declared racial segregation to be merely a “function of living patterns…not the result of any policies of the Board of Education.” But to Thomas and his allies, it was the Board’s policies—or rather its lack of policies—that produced racial segregation in Racine’s schools.

In October 1964, the Racine Unified School Board published “A Proposed Statement of Position,” its first open admission that the district did indeed have a problem. The board committed to “studying the problems of educating disadvantaged youth” in order to “develop programs to overcome the handicaps environment may have placed” on these children. While some considered this an important step toward equal educational opportunities for minorities in Racine, many were not satisfied with what they viewed as “token progress.” Thomas was fearful that the school board underestimated the potential volatility of the situation. Unless immediate action was taken, Thomas declared, “There’s going to be another Birmingham right here in Racine.” He was referring to the widely publicized racial confrontations in Birmingham, Alabama, in the summer of 1963 that produced such rampant mayhem that the federal government was forced to intervene. Neither the school board, Thomas, nor anyone else in Racine wanted a situation like the one in Birmingham.

To avoid this type of racial conflict in Racine, the district needed to make meaningful progress toward solving the problem of desegregation. In 1966, it received a valuable, albeit inadvertent, introduction to racial integration. The closing of Franklin Junior High School and the subsequent opening of Gifford Junior High School required the district to redraw its junior high boundaries. At the start of the 1966–67 school year, Franklin Junior High’s former students, almost half of whom were black, found themselves dispersed among four junior high schools (see table 1).

The following year, the Racine Unified School District was again in flux. The closing of another inner-city junior high school and the opening of J.I. Case High School sent the district back to the drawing board. Again, new boundaries resulted in a more equal distribution of African American students. Although racial integration was not necessarily the purpose of the realignment of district boundaries, the dispersion of minorities that followed the opening of new schools in Racine presented the school district with an example to follow in the years to come.

As the heat of the school integration movement intensified in the North, Racine, a city previously icily indifferent to de facto segregation, began to thaw. In 1966, the Racine Unified School Board produced its “Report of the Special Committee on the Educational Opportunities of the Minority Group Children,” articulating 13 principles that would guide the “search for improvement of educational opportunities for minority group children.” Two years later, the board stepped up this search, making their stance
against unequal educational opportunities official by adopting a policy to “take specific action to erase undesirable cultural, ethnic, and racial imbalances.” The passing of this resolution made all plans within the district contingent on the reduction of racial imbalance. Thomas of course supported this resolution, but dryly suggested it was a “little late in coming.” According to him, “it should have been done five years ago.”

Despite the extended wait, many in Racine were excited about the significant progress toward racial equality made by the school board.

Perhaps the biggest step taken on the path to desegregation in Racine came on the heels of the 1969 Howell School controversy. As whites all over the North staunchly defended their neighborhood schools, this Racine neighborhood school offered many African Americans a prime example of de facto segregation at its worst. Located at one of the city’s busiest intersections, Howell School had a minority student population of more than 75 percent. Throughout the 1960s, the school’s terrible condition had repeatedly garnered complaints from administrators, teachers, and parents. The building’s condition was so poor that there was a widespread concern that strong winds would cause the roof to collapse. In fact, Howell was the only school in the district that was required to have “high wind” drills in addition to fire drills. Several times, the Racine Unified School District had promised families in the Howell area, via bond referenda, a solution to the dismal situation. Each time, however, these families were disappointed by the district’s failure to act.

In the absence of any action by the district, the Racine NAACP decided that it had to take charge. In November 1969, following a formal inspection, the NAACP Education Committee declared Howell “blatantly unsafe” and an “absolute disgrace” to the city of Racine and to the Racine Unified School District. Claiming that the inaction of the board had relegated Howell’s students “to a sub-human level,” the committee rendered the school district “guilty, not only of child neglect, but of hypocrisy as well.” The findings of the Education Committee left the NAACP with no other choice but to demand the immediate closing of Howell School.

After a prolonged deadlock on the issue, the Racine Unified School Board finally succumbed to the pressure and intimidation by the NAACP and passed a resolution to permanently close Howell School as of January 10, 1970. As with the school closings in 1966 and 1967, the closing of Howell contributed to the further dispersal of African American students among predominantly white schools. Moreover, the closing of Howell confirmed the powerful impact of the NAACP and its young president, Julian Thomas. Although Thomas was already a revered leader prior to the Howell dispute, his successful leadership in this difficult and potentially volatile situation inspired unanimous confidence from the African American community. Equally significant, Thomas won the respect of members of the white community. Most people in Racine, black and white, had proved to be tentative in coping with racial difficulties. In Thomas, Racine recognized a leader who would provide the assertiveness needed to overcome these racial difficulties and direct others to do the same.

In the late 1960s and early 1970s, the realignment of district boundaries, dispersion of minority students, and racial enlightenment of the school board served to whet the appetite of those hungry for integration. According to Thomas, the NAACP “began to think in terms of . . . what centers could be utilized within the inner city where white kids would be brought in and minority children out.” If busing was necessary, as most thought it was, then “it should include busing of students both ways,” Thomas proclaimed. This concept sent shock waves through Racine’s white, middle-class suburbia. Most of these parents had no problem with reducing “racial imbalances” and even with the busing of inner-city students to what the district referred to as “outer schools.” The idea of having their children bused to inner-city schools, however, seemed inconceivable.
In 1972, the Racine Unified School Board began discussions regarding plans to desegregate schools in the district. Their hastily drawn plans included the busing of suburban children to inner-city schools. As in many Northern cities, two-way busing inspired bitter protest from many white parents in Racine. Even though almost half of all public school students rode the bus to school by 1970, opponents of busing championed neighborhood schools, defending the time-honored tradition of children walking or riding their bicycles to school. Across the North, the frenzy of the white electorate led many elected officials to jump aboard the anti-busing bandwagon. In 1972, Racine was no different. The white outcry against busing compelled the school board to dismiss the desegregation proposals altogether. According to Racine Superintendent C. Richard Nelson, the failure of the first attempt at desegregation forced the district to seriously reevaluate its approach. Although he said the plan was misunderstood, Nelson admitted that the district made some critical mistakes in its initial attempt to establish a strategy for desegregation, and realized that it needed to take a better “method of approach” in carrying out the order to desegregate.

Thomas and the NAACP, however, were not in the mood to be patient while the district worried about stepping on the toes of white parents. Almost 20 years since the Brown decision, many in Racine felt that the only way to achieve school desegregation in Racine was through legal action. In 1972, Thomas and the Racine NAACP, fed up with token progress and empty promises, laid plans to take court action against the Racine Unified School District. “The only thing that would prevent us from filing suit,” Thomas said, “is for the schools [in Racine] to be desegregated.” Despite his strong desire for immediate action, Thomas recognized that the big picture of desegregation extended beyond Racine. In the eyes of the NAACP, Racine was an important, yet small battlefield in the larger war against school segregation. In 1973, Thomas informed the district of the NAACP’s intention not to pursue a lawsuit in Racine until the Supreme Court had ruled on the pending Detroit and Denver desegregation suits, citing “the great similarity between these school districts and ours.” Thomas and the NAACP continued to cooperate with Nelson and the district to pursue, in the words of the Wisconsin Department of Public Instruction (DPI), “the legal right to a nonsegregated education . . . for all students.”

Fittingly, later that year it was the Wisconsin DPI that drove the Unified School District to put the decisive nail in the coffin of school segregation in Racine. In June 1973, the DPI sent out state guidelines for desegregation to all school districts. These guidelines insisted on racial balance “within ten percentage points of the proportion of all ethnic groups in their district.” William Colby, director of the DPI’s Equal Educational Opportunities division, was hopeful that this would compel racially imbalanced districts to integrate. However, as he later explained, the state guidelines “were only recommendations and did not have very much force.” Yet combined with the external pressure from the NAACP and the Racine community, these guidelines finally pressed the district into a momentous decision that led the city to be viewed as a “model for the nation.”

In a September 1973 meeting, school board president Gilbert Berthelsen motioned for a resolution that adopted the guidelines set by the DPI. The motion, scheduled for a vote in October, sparked intense debate in Racine. In many ways, the controversy surrounding the “Berthelsen motion,” as it became known, echoed the wide-ranging debates across the North in regards to public school desegregation. Some, like Thomas, were elated at the prospect of ultimately realizing school desegregation and emphatically called for the passage of the motion. Thomas urged the school board to adopt the motion and “correct this damnable situation in our District.” However, Thomas’s efforts to persuade some, especially board member Lowell McNeill, were
futile. In fact, McNeill was one of the motion’s most fervent public opponents, even rejecting the idea that the district had segregated schools. Furthermore, he argued, the widespread busing that would accompany a desegregation plan would mean a “complete end” to the advantage of neighborhood schools. This point of view resonated in almost every Northern city and gained significant support among whites in Racine.

Other groups demonstrated their resistance to school desegregation in a more extreme manner. One group in particular, the National Socialist White People’s Party, caused quite a stir in Racine. Wearing swastika armbands, members loudly denounced racial mixing and distributed literature supporting white self-determination. Although the presence of the National Socialists received considerable media attention, few whites in Racine shared their radicalism.

It was not just white citizens who opposed the Berthelsen motion. Many African Americans, including school board member the Reverend Lawrence Hunt, felt that the implementation of a desegregation plan would do more harm than good for minority students. Contending the proposal for a quota system would mean “resegregation” for black students, Hunt insisted upon the value of schools with a heavy concentration of minorities as a way to avoid “segregation . . . from their own culture.” He alleged that many of the district’s educational inequalities stemmed not from the physical distribution of minority students, but from the shortage of minority teachers and lack of emphasis on minority curriculum.

The most overwhelming objection from the African American community to the proposed desegregation plan surrounded busing. Maintaining that the burden of desegregation would fall squarely on the shoulders of minority students, many questioned whether the benefits of school desegregation outweighed the extensive busing that accompanied it. This stance was publicly supported by a few large community organizations, including the Racine Urban Ministry and the Racine Clergy Association. To supporters of the Berthelsen motion, winning over this segment of dissenters was imperative to making desegregation work in Racine. As the school board vote approached, Berthelsen implored these dissenters to look past the flaws of the initial proposal, stressing that “segregation or desegregation . . . is the only issue before us.”

On October 8, 1973, the Racine Unified School Board accepted Berthelsen’s motion by narrowly passing the resolution requiring that “no school within the Unified School District shall have a minority population in excess of an amount 10 percent above the percentage of minority students in the District.” The school board resolved to implement this resolution by the start of the 1975 school year. Following the passage of this resolution, some feared the widespread dissent, protest, and violence that developed in other Northern cities attempting to integrate. However, as Colby recognized, there were “far more wholesome attitudes in Racine.” Not only did citizens want to avoid any sort of demonstrative violence, the majority was determined to circumvent the political football that had plagued other cities. Instead of forcing an ugly desegregation lawsuit, the community developed a sense of pride in the voluntary nature of desegregation in Racine. This respectful and virtuous reaction of Racine citizens to the school board’s decision played a crucial role in the city’s exemplary implementation of school integration.

By 1974, even though most of Racine had accepted the concept of school integration, the city was still sharply divided on the structure, size, and scope of a potential desegregation plan. The October 1973 resolution created a citizen’s advisory committee to develop four plans for the desegregation process. “Minimum busing” was among the criteria the committee established for the development of the four plans to be presented to the school board in July 1974. Yet busing, as it had been before the resolution,
would continue to be a focus of debate in Racine. Amazingly, in spite of the committee’s intentions, all four plans drew flak from the public in regards to busing.50

As the school board vote drew near, Thomas and the NAACP took what he called “a stand not to take a stand,” deciding to not publicly endorse any one of the four plans. Although he had conveyed some of his likes and dislikes of the four plans to the school board, Thomas said he did not want to give the board “an excuse not to do anything.”51 His decision to refrain from speaking out against the Redistribution Plan prior to the school board vote attracted some criticism from the black community. Pegged by the Racine Star-Times as the “one-way busing” plan, the Redistribution Plan had incurred a great deal of public opposition from the African American community because it “placed the burden of busing on minority students.” However, Thomas and the NAACP recognized it was the only plan with a chance of gaining school board approval. As difficult as it was to remain silent, Thomas realized strong protest against the Redistribution Plan would only result in the postponement of school integration.52

On August 12, 1974, the Racine Unified School Board voted to adopt the Redistribution Plan, which called for the busing of minority children away from the inner city, even ending regular classes at some inner-city schools. According to the Reverend Eugene Boutilier, “most knowledgeable members of the [black] community were not in favor of this plan.” However, as Thomas understood, the possibility of further delaying school desegregation in Racine was far worse than the problems associated with the plan. Thomas and the NAACP were not the only ones to sacrifice short-term objectives in order to achieve the greater, long-term goal of school integration in Racine. The Reverend Howard Stanton, a board member, favored the Cluster Plan. This plan offered parents a choice, within their geographic “cluster,” of the type of school their child would attend. Yet, despite his misgivings, Stanton voted for the Redistribution Plan, admitting that “the cluster plan [had] no chance of passing.”53 Even Superintendent Nelson had contended that the Redistribution Plan, as “the most acceptable plan to the white community,” was the only plan with the possibility of being approved by the school board.54

While it was no surprise to Thomas that the board selected the plan least upsetting to white parents, he was not prepared to surrender. Instead, Thomas began his quest to remedy the “one-way busing plan.” As presented to the school board, the Redistribution Plan involved the least amount of student busing of the four plans. But as many opponents of the plan had maintained, it put “the burden of desegregation” on black students. The plan called for the reassignment of more than 50 percent of Racine’s minority students, compared to only 3 percent of white students. Although he would not seek a reversal of the board’s decision, Thomas demanded a meeting with school officials to share the NAACP’s concerns about this “unfair” and “unacceptable” plan.55

Those who knew Thomas had often heard him recite his favorite quote: “No man is too big to be small and the real test comes when a small man thinks big.” In Thomas’s case, thinking big about school desegregation in Racine led to a “real test” of his mettle as a leader. Faced with a plan that caused many in the black community to question the merit of school desegregation, it was up to him to salvage the vision of “true freedom” he had for Racine.56

Pursuing a spirit of cooperation, a determined Thomas worked with Superintendent Nelson and other school officials to find a middle ground that appeased some of the concerns of African Americans in Racine. On January 4, 1975, a revised Redistribution Plan was presented to the board. In this presentation, the committee admitted that the original plan had “placed the burden of busing on the minorities.” The revised plan had, to an extent, eased this burden by reducing the difference in the numbers of
children moving in versus moving out of the inner city. The revised plan also allevi-
ated concern about the closing of three inner-city schools. Instead, these schools
would become magnet schools, used for optional programs like fine arts. These magnet
schools would also further reduce the difference in students being bused in versus
bused out.\textsuperscript{57} Finally, the revised plan also addressed class size, another grievance of
many African Americans, by reducing the student-to-staff ratio to 24.9-to-1.\textsuperscript{58}

The revised Redistribution Plan, despite significant improvements, still left
many black parents unsatisfied. Stressing the long-term potential of integration,
Thomas worked tirelessly to convince African American parents to go along with the
plan. “[It] does not meet all of our criteria, but it’s not far off,” he proclaimed. “It’s a
workable plan.”\textsuperscript{59} Parents eventually accepted the plan, as they came to understand that
the benefits of desegregation far outweighed its shortcomings. It was Thomas’s effort
to promote compromise and unify support in the black community, despite his own
trepidations about the desegregation plan, which laid the foundation for the success of
school integration in Racine.

September 2, 1975, the first day of school in the newly desegregated Racine
Unified School District, brought a quiet unease to Racine, perhaps a calm before the
storm. As students prepared for new schools and teachers prepared for new students,
no one knew what to expect. Superintendent Nelson, however, was optimistic about
the coming school year. As the head of the district, he had the primary responsibility
of carrying out the order to desegregate. Armed with an unwavering belief in the value
of school integration, Nelson publicly and privately won over doubters throughout
the district. Desegregation was important, he proclaimed, not only because the laws
indicated segregated schools were illegal, but because of its social and academic
payoff. Nelson also firmly believed that integration would procure economic benefits,
reversing white flight from Racine. Like Thomas, he understood that desegregation
could encompass more than just a school district. And like Thomas, he knew the value
of community action in achieving such lofty goals. Despite first-day jitters from some
in the community, Nelson’s optimistic predictions prevailed. After all of the clamor
leading up to September 2, he could not have been more elated in publicly announcing
that “the first day under the desegregation plan was quieter than a usual opening day.”\textsuperscript{60}

Racine became celebrated across the country for its successful school deseg-
regration, earning the type of praise that would have made Racine’s earliest liberator,
Sherman Booth, and his men proud. \textit{The New York Times} called the school integration
program in Racine “a model for the nation.”\textsuperscript{61} Applauding the “mature manner in which
this most difficult of community problems was approached,” \textit{The Milwaukee Sentinel}
suggested Racine serve as “a standard for other metropolitan areas to follow.”\textsuperscript{62} Resi-
dents of Racine echoed these sentiments. “Things have gone very smoothly,” said
one teacher of the desegregation effort. In a 1976 survey, 90 percent of teachers and
more than 80 percent of parents “believed desegregation was working successfully.”\textsuperscript{63}
Perhaps the best indicator of the success of desegregation was the approval of children
like Terry Price, an African American fifth-grader bused from the inner city. Of his new
school, Terry cheerfully professed, “I just like it here better.”\textsuperscript{64}

Yet the triumph of desegregation did more for Racine than just give children like
Terry a better school. Although many originally saw desegregation as solely a way of
equalizing educational benefits between blacks and whites, the effects of desegregation
resonated to a much larger degree, advancing interracial and intercultural relations in
every facet of the community. Like Thomas, others in Racine used desegregation to
think big, incorporating it into the broader role of promoting a racially
harmonious society.
Activists and scholars across the nation were eager to determine the source of Racine’s success. Some of the relative ease of desegregation in Racine could be credited to its voluntary nature. Because it was “not forced suddenly down the throats of citizens,” Superintendent Nelson maintained school desegregation in Racine did not inspire animosity as it did in other Northern cities. On the contrary, he said residents “were determined not to become another Boston,” referring to the racial discord that disrupted Boston schools. After the plan was adopted, it was accepted by the community, even by those who had opposed it. Without a doubt, the city’s unified stance toward desegregation was instrumental to its success.

Another aspect attributed to the smooth implementation of desegregation was its relative gradualism. According to Nelson, time was a “key factor,” enabling the community and staff to “get used to the idea, read about it, and follow its planning process.” The two years granted to the district following the Berthelsen motion in 1973 were meant not to delay integration, but to permit the district to develop a plan “carefully, gradually, and with citizen input and cooperation.” These two years, Nelson said, also allowed for “a flurry of activity” aimed at “minimizing the culture shock” of integration. Many teachers, administrators, bus drivers, and secretaries were unfamiliar with the unique cultural aspects of Racine African Americans. To breed a greater degree of familiarity, district personnel were required to attend seminars, workshops, and human relations training in preparation for the coming school year. During the summer, the district also planned activities—picnics, basketball camps, Milwaukee Brewers baseball games, swimming parties—to give children an opportunity to mingle with their new classmates.

The two years following the Berthelsen motion also provided the district, the NAACP, and others time to build community support for the desegregation plan. The community, Nelson claimed, was the real reason desegregation in Racine was so successful. To illustrate this, he pointed to an August 1974 full-page advertisement in the Racine Journal-Times, just prior to the board’s vote on the selection of one of the four proposed desegregation plans. The advertisement, which included more than 230 signatures, endorsed the unequivocal desegregation of Racine schools. This visible sign of community support, Nelson said, was crucial to the successful implementation of desegregation. He called the community’s commitment in spite of differences “the most essential resource of all” in the desegregation process.

Within the community, perhaps no one was more committed than Thomas. He spread his passion for “real freedom” throughout Racine, countering years of apathy and indifference. Tom White, former president of the Wisconsin NAACP, said of Thomas: “During crisis times, Julian [was] called upon for experience, not only by blacks but also by the total community.” Superintendent Nelson and other school officials, though sometimes at odds with Thomas, recognized and appreciated his strong, supportive leadership in the process of desegregation. They realized that without the positive force of Thomas and the NAACP, the racial accord established through school integration could never have been achieved in Racine. African Americans, on the other hand, were grateful for Thomas’s great mental courage as he led them into the battle for “real freedom.” To resolve the crisis of school segregation, Racine depended on Thomas, a leader who had the respect of the entire community.

In a 1979 speech, Thomas’s esteemed colleague Superintendent Nelson described desegregation as “a very small down payment on an investment whose dividends are good education, citizenship, justice, and the welfare of the entire community.” At the time, very few cities in the North were willing to make this payment. Yet Racine, Wisconsin, because of its outstanding community support and extraordinary leadership, bought into desegregation, and once again became a “model for the nation.”

Post-Event Urban Flood Mapping by Amateur Aerial Photography and Assessment of Potential Damage: Case of Fond du Lac, Wisconsin

Jennifer Haegele, author
Dr. Mamadou Coulibaly, Geography and Urban Planning, faculty adviser

Jennifer Haegele graduated in December 2010 from UW Oshkosh earning the merit of magna cum laude and obtaining a B.S. degree with endorsements in geographic information systems, criminal justice, and computer science. During the 2010 academic year, she collaborated with Dr. Mamadou Coulibaly through the Undergraduate Student/Faculty Collaborative Research Program. She worked for AeroMetric as a LiDAR technician while awaiting attendance at Southern Illinois University-Carbondale (SIUC) for graduate school. In fall 2011 she started her master’s program in criminal justice at SIUC.

Dr. Mamadou Coulibaly is associate professor of geography and urban planning at UW Oshkosh. He has a master’s degree in geology and a Ph.D. in geography from Southern Illinois University-Carbondale. He teaches geographic information systems (GIS), remote sensing, water resources management, and world regional geography. His research involves GIS applications for water resources management and urban flash flooding. Since 2006 he has been the treasurer for the Wisconsin Geographical Society.

Abstract

On June 12, 2008, the city of Fond du Lac, Wisconsin, was blindsided by a major flood because many never knew that their residence was located in a flood-prone area. Most city roads were reported to be under water and in some places bridges were even submerged by the Fond du Lac River. A lot of the damage was so severe that the Federal Emergency Management Agency (FEMA) awarded Fond du Lac more than $1.2 million to assist with repairs of homes and the city. As with the case of Fond du Lac, mapping flood-prone areas can prepare potential victims and enforce local floodplain management policies. To accomplish this, FEMA launched the Map Modernization project, which aims to update the nation’s flood maps. However, the agency is not able to do this alone and has decided to partner with local agencies to produce more accurate flood maps. Therefore, this project investigated the possibility of mapping urban flood areas from amateur aerial photographs and compared the resulting flood map to the most recent FEMA maps of the study area. On a broader level, the study updates the FEMA flood maps of Fond du Lac, Wisconsin, and the methodologies developed in this study can help similar cities across the nation adjust their flood maps.

Statement of the Research Purpose

Urban natural disasters are worsening because, among other reasons, an increasing portion of the world’s population lives in large cities. Thus, urban hazards, such as flooding, pose serious challenges for the future. Exposure and vulnerability are the components of hazard that are changing fastest and have the gravest implications for urban populations (Mitchell 1999). Also, flooding is the most common environmental hazard due to the attraction of humans to river valleys and coastal areas and because these natural features are widely distributed (NC Division of Emergency
Flash flooding in urban areas often takes residents by surprise. According to Gruntfest and Handmer (2001), the high potential for loss of life and disruption from flash flooding requires identification of the location of flooding, properties, and the people at risk. Therefore, investment should not only be applied to identifying high-risk flood areas, such as the ones near rivers and oceans, but also to the mapping of other potential urbanized flood-hazard areas. I studied the possibility of using a relatively simple, fast, effective, and economical way of mapping flood hazards in an urban setting, which could benefit other small cities.

As evident in Chan’s (1997) study, flood events that took place as a consequence of rapid development and environmental degradation are quickly forgotten because people choose to see only the positive benefits of a rising economy while ignoring negative side effects. Flood maps could be used as a constant reminder of hazards. Flood risk management should be a part of community development and residents could play a role in managing flood risks without relying on external entities (Osti et al. 2008). The procedure and results of the proposed flood hazard mapping tasks would encourage community-based flood management and improved local use of flood maps. I planned to accomplish that goal by using spatial analysis tools of geographic information systems (GIS). That spatial technology is capable of assessing and estimating regions of hazard by creating thematic maps and overlapping them to produce a final hazard map (Mansor et al. 2004). Therefore, this study used GIS to integrate spatial data and produced a flood risk map that is accessible and easily understood. I also plan to develop a post-flood mapping guideline to be implemented during and immediately after flood events as well as adjust existing FEMA maps and provide an assessment of potential damage.

It is important to have accurate flood maps because the National Flood Insurance Program (NFIP), directed by FEMA, requires local governments to enact floodplain management guidelines. If these guidelines are followed, private developments in designated flood-prone areas are eligible for federally subsidized flood insurance (Dzurik 2003). FEMA has already created more than 80,000 flood insurance rate maps for roughly 20,000 communities and provides flood insurance rate map data to be used with commonly available desktop GIS and mapping programs (Whitney 1997). To bring both the information and the technology up to date, FEMA launched a Flood Map Modernization program called the Map Modernization Project. It aims to make the nation’s flood maps more accurate and to convert them to a GIS format. FEMA cannot do this sizable task alone, and has therefore utilized community programs and partnered with local agencies (Quarles et al. 2002; Engelhard 2004).

The site selected for this project is the city of Fond du Lac, Wisconsin (fig. 1). On June 12, 2008, Fond du Lac was devastated by a major flooding event (fig. 2). Since then, the city has been in the process of updating floodplain maps and regulations that have not changed since 1988. Updating the floodplain maps is part of a FEMA effort that uses digital technology to make the maps easier to interpret (Veremis 2008). According to Fond du Lac Community Development director, Wayne Rollin, “there are no big changes in terms of floodplain boundaries, but a big change in the usability and quality of the map.” However, many residents say that the June 2008 flood was unexpected because they never knew that they resided in a flood-prone area, thus they were not prepared to take action. For this reason, the city of Fond du Lac is an ideal site to conduct a study on ways to delineate the extent of past flood events for mapping purposes. Thus, I mapped the 2008 Fond du Lac flood areas using oblique amateur aerial photographs and assessed the recent FEMA floodplain map of the site. The study assessed a relatively cheap way to create, adjust, or update FEMA flood maps of Fond du Lac and the methodology and lessons learned can help similar small cities across the nation adjust their flood maps.
Methodology

The use of GIS and remote sensing for mapping the flooded areas and an overlay analysis (spatial comparison) to assess the local FEMA flood map were the two major components of this project. To begin mapping the flooded area I needed to make a selection from several aerial photographs that were taken after the event. These were received courtesy of Adam Dorn, a GIS specialist serving at the Fond du Lac City/County building. Specific photographs with an optimal aerial view (covering a wide area) and an oblique vantage point were chosen. However, since the photographs were not geographically referenced to a specific location within Fond du Lac, I worked with Fond du Lac representatives to discover their locations.

After finding the photographs’ locations, I fitted them to the other spatial data (map) by matching their features with corresponding features on other layers (i.e., roads) that are in a known coordinate system. This matching process is referred to as georeferencing, the task of aligning geographic data to a known coordinate system. I then reduced their distortions with a process called rectification, the process of applying a mathematical transformation to an image so that the result is a planimetric (having no indications of relief) image. This is done because raw digital images, such as the oblique photographs used for this project, are not aligned with any conventional geographic coordinate systems, and they commonly contain internal geometric distortions that occur during the image acquisition process (California Institute of Technology 2007). During a georeferencing task, control points must be accurately located, sufficient in number for the transformation model selected, and distributed uniformly across the image (MacroImages Inc. 2009). With the newly georeferenced/rectified

Figure 1. Location of Fond du Lac in Wisconsin including Lake Winnebago and river networks. Map created using ArcMap 9.3.
aerial photographs, flooded areas can be traced/digitized and interpolated between photos. To do this, I delineated the contour of the affected areas of the June 2008 Fond du Lac flood event and created a new layer with the ArcMap software.

For the second aspect of the study, the most recent layer of FEMA flood maps of the area (a polygon layer) was compared to the layer of flood polygons resulting from the completion of the first part of the project. The two (assumed dissimilar) polygon layers were subject to a spatial overlay analysis technique, which provided coincident (common/overlapping) areas as well as non-coincident (non-overlapping) areas of each input polygon. The use of this technique is supported because we often need to overlay layers that have completely different underlying geographies in order to combine attributes from the two input layers into a third output layer (California State University, Fullerton 2009). *Union, intersect, symmetrical difference*, and *identity* are the four types of overlays one could use to compare the two flood maps. However, I only wanted to produce the coincident and non-coincident sections of both maps. Therefore, I used only the intersect and the symmetrical difference overlay methods. Intersect preserves features that fall within the area extent common to the inputs while symmetrical difference preserves features that fall within the area extent that is common to only one of the inputs (Chang 2009).

**Overview of Resulting Methodology**

The four major components of this project were the use of GIS and remote sensing for determining the flooded areas, the application of union and overlay GIS analysis to assess the flooded areas not accounted for in the FEMA flood maps, a damage assessment of the areas, and the determination of the possible cause of the flooding (riverine vs. inadequate storm drainage).

![Figure 2. Oblique aerial photograph showing severity of damages to the city of Fond du Lac the morning after the event. Photo courtesy of Adam Dorn, Fond du Lac Sheriff’s Department, and Fond du Lac Reporter.](image)
Assessment of the Flooded Area

I first used a sample location of the flooded area that I selected from several aerial photographs taken after the event. Specific photographs with an oblique aerial view (covering a wide area) were chosen to conduct the processes of georeferencing, rectification and delineation of the flooded areas. However, because the photographs of the selected area were fewer than needed and some were severely oblique, the photos I could rectify were severely disconnected (with respect to distance) and did not cover a large enough area (fig. 3). This is because only photos of flooded areas were taken instead of the entire city. Therefore, I could not use them alone for a manual flood delineation as originally suggested. Instead I used all available photographs, including the severely oblique ones, of the site that displayed flooded areas in the following process.

After finding the photographs’ locations, I represented the flooded extent (on the photo) by digitizing points over the corresponding ground features using a process called point digitizing. Each point was assigned a flood intensity value based on a scale of 1 to 3: “1” described minimum flooding, “2” described moderate flooding, and “3” described maximum flooding (fig. 4). I interpolated (estimated surface values at unsampled points based on known surface values of surrounding points) the newly digitized flood points of the area using the Ordinary Kriging method, a form of interpolation. From the output of the interpolation (fig. 5), I selected the cell values that were greater than two in order to distinguish areas that were moderate to severely flooded from the areas that were barely or not flooded at all (fig. 6). I then converted the grid containing severely flooded areas from raster (representation of the world using a surface divided into a regular grid of cells) to vector (representation of the world using points, lines, and polygons) to compare them to the FEMA layer (also vector) by using a union overlay analysis process.
Figure 4. Digitized points of the flooded area using a severity scale attribute of 1 (min) – 3 (max).

Figure 5. Interpolation (Kriging) of digitized points with a value greater than two (2).

Figure 6. Selection of flooded areas with cell values that are greater than two (2) from the interpolation of the digitized points.
Comparing Flood Assessment by Photos to FEMA Map

For the second aspect of the study, I used the most recent version of the FEMA flood maps of the area. This FEMA flood map layer contains attributes that express the severity of the different flood zones. Although there are several FEMA flood zones (table 1), I only selected zones AE and AH located in the “High-Risk Areas” for this project because we are only interested in the high-risk zones that are not directly related to the lake and river flooding.

Table 1. FEMA flood areas and zones

I selected only the zones that were designated as “hazardous flooding areas” from the FEMA layer (using the Structured Query Language selection FLD_ZONE=’AE’ OR FLD_ZONE=’AH’) and then converted that selection to a new layer (fig. 7). With the newly created layer of FEMA’s “hazardous flooding areas” flood zones and the vector layer of flooded areas derived from the photos in part A, I was able to run two sets of alternative combination of GIS operations (union-intersect and symmetrical difference overlay analysis) to select only the areas that were flooded and not accounted for by the FEMA layer. The union operation served to combine both of the layers and their attributes into a new union layer. From the union layer, I selected only the features where the FEMA flood zones and the zones I generated did not overlap. The last selection shows the areas of FEMA flood zones that I did not map and the flood zones that I generated but that FEMA did not take into account (fig. 8).
Assessment of Potential Damage

After obtaining a block population point layer containing data on the number of houses and people in a selected area from U.S. Census data, I clipped/removed some of the data from the population layer to fit the size of the selected Fond du Lac study area layer (fig. 9). Using the clipped block population layer and the union layer of flooded areas generated by FEMA and by photos, I ran an intersection overlay analysis to obtain only the block population layer’s point features of the flooded area (fig. 10). That operation also attached to each block point the attribute (information/description) of the corresponding flood features from the union layer. By computing some of the attribute data attached to the previously created flood-block intersection layer, I was able to determine the number of houses in the selected damage zone, the number of occupied houses, and the number of people who live within the area that are not accounted for by FEMA. The area has a population of 821,311 occupied households and 322 housing units (fig. 11).
Figure 9. Block population layer for Fond du Lac area.

Figure 10. Result of intersection overlay analysis using union layer and block population. The dots express the number of houses for the census block they represent.

Figure 11. Statistics of individual areas and the sum of entire.
Determination of the Type of Flooding

For the third aspect of the study, I created a digital elevation model to generate the sub-watersheds (a smaller basin within a larger drainage area where all of the surface water drains to a central point of the larger watershed) and stream networks of the selected Fond du Lac area to determine whether the flooding was due to the expansion of the river and lake waters or to inadequate storm drainage in that area. This assessment assumes that flooding caused by the river will stay in the river’s sub-watershed and its vicinity, and that flooding caused by the lake will stay in the lake’s sub-watershed and its vicinity.

After generating the sub-watershed of the entire Fond du Lac area, I selected only the sub-watersheds that are within the selected sample area to create a new layer. Overlaying the sample area’s stream network layer onto the sub-watershed layer allows us to visually determine where the streams and watershed of each flooded area is connected to the river (fig. 12). The areas that contained flooding and that are not in a watershed related to a river or lake are likely to be caused from an inadequate storm drain system.

Figure 12. Sub-watershed and stream network of Fond du Lac.

Conclusion and Future Research

The outcome thus far has shown that the number and distribution of photographs, as well as their obliqueness or aerial view, contributes greatly to the successful and accurate completion of this project as well as similar future projects. It also shows that the use of GIS allows for a reasonable estimate of locations that should be accounted for by FEMA. I have therefore concluded that the original approach involving georeferencing, rectification, and delineation of a flooded area based solely on aerial photos (no ground photos) is feasible (fig. 3) provided there are sufficient adjacent photos. This technique is being further refined by a forthcoming study Dr. Coulibaly and I will conduct, which will allow us to assess the efficacy of the current process as a measure of the amount of interpolated area with respect to the actual flooding mapped from aerial photographs. However, for the purpose of this study, it was necessary to supplement the aerial photos with ground photos.
Notes
1. Ordinary Kriging: A kriging method in which the weights of the values sum to unity. It uses an average of a subset of neighboring pairs of points to produce a particular interpolation point. It is the most commonly used kriging method.
2. Kriging: A geostatistical interpolation technique in which the surrounding measured values are weighted to derive a predicted value for an unmeasured location.

Bibliography

Communication Accommodation in Mixed Gender Dyads

Rebecca Stupka, author
Dr. Erin Winterrowd, Psychology, faculty adviser

Rebecca Stupka graduated cum laude from UW Oshkosh in May 2011, receiving a B.S. in psychology with a minor in philosophy. This research was done in partial fulfillment of the University Honors Program requirements. In the future, Rebecca plans to attend graduate school for school psychology.

Dr. Erin Winterrowd is an assistant professor in the Department of Psychology. She received her Ph.D. from Colorado State University and began teaching at UW Oshkosh in 2010. Her research interests center around the psychology of gender and psychology of women with particular emphasis on gendered meanings in suicidality and experiences of underrepresented groups in STEM (science, technology, engineering, and math) fields.

Abstract

Men and women speak differently. That is, there are observable patterns of gender differences in communication. To reconcile differences and facilitate communication it is necessary to use accommodation, the process of adjusting patterns toward or away from a conversational partner. Past research on accommodation has been limited to laboratory settings, in which conversational topics are assigned or suggested and participants are put in an unfamiliar situation with unfamiliar conversational partners. This study extends research on gender accommodation by using unobtrusive observation of male-female dyads in conversation within the public domain. Consistent with the literature, I hypothesized that women would exhibit more convergent accommodation behaviors than men overall; that in conversations in which the topic is stereotypically feminine, men would exhibit more convergent accommodation behaviors than women; and that in high-stress conversations both partners would exhibit divergent accommodation behaviors. Results indicate strong support for the first hypothesis, but do not show support for the second and third hypotheses. Furthermore, the results indicate some deviation from past laboratory research within the factors affecting accommodation and in stereotypical conversational indicators in use during this study.

Introduction

What is the difference between responding to an interruption by saying, “I’m not finished yet” and “Can I finish”? That difference in fact is quite valuable from a research perspective. The phrase “I’m not finished yet” is more likely uttered by a man; it shows concern with independence, it is direct, and it is goal-oriented. On the other hand, the phrase “Can I finish” is more likely uttered by a woman; it shows concern with interdependence (social approval), it is indirect, and it is emotion-oriented. Though these responses are similar, they represent some of the small fundamental differences in communication patterns moderated by gender differences. In a world in which men and women are constantly interacting socially and professionally, it is important to consider how they communicate with one another. It seems obvious that men and women converse differently, which represents an important area of investigation for researchers. Research that examines speech differences attempts to define speech in terms the other gender might understand in order to better facilitate relationships between men and women. From my understanding gender is defined as a social
construction. Gendered language, for the purposes of this study, would therefore be explained as learned behaviors supported by society’s conceptions of gender. The effectiveness of communication between men and women is influenced by the gendered patterns of speech they follow. The research done on these gendered patterns is often difficult because gender differences tend to disappear in mixed gender dyads (male-female pairs). This issue can be addressed via research on the process of accommodation, which may be the cause of the decrease in gender differences.

**Accommodation**

According to Communication Accommodation Theory (CAT), accommodation is the process by which people, regardless of gender, adjust their patterns of communication to accomplish social goals. CAT suggests that people accommodate in a convergent manner (or toward one another) when they are concerned with social approval and in a divergent manner (or away from one another) when they are concerned with boundaries. Convergent accommodation may be as simple as adopting the accent of a conversational partner, while divergent accommodation could be enunciating speech to avoid that conversational partner’s accent. Furthermore, CAT describes accommodation in terms of symmetry in addition to direction; partners may accommodate equally or, as in most cases, unequally. A 2002 study of 42 men and 42 women in a laboratory setting found that women tended to accommodate more than men, and that generally people accommodated more to male speech than to female speech. The study further suggested that women were more attentive and sensitive to accommodation than men; it also showed that, when listening to speech, women noticed and reacted to accommodation patterns more than men. However, this study lacked conversational reality, as it was done via repeating individual words from a list. In addition, a 2005 study found that women were more likely to accommodate to men phonologically, or in terms of vocal sounds (e.g., pitch). This study also indicated that Northern women may be more advanced in the Northern Cities Chain Shift (or a shift of vowel sounds originating in Northern cities) due to accommodation, which accounts for a slight difference in the speech of women and men from the same region.

Another accommodation variation to consider may be the phenomenon of “mutual hyperconvergence,” which is a form of overaccommodation, or convergence on the part of both male and female conversational partners.

**Factors Affecting Accommodation**

Much of the research on accommodation additionally cites several factors that could affect accommodation processes between genders. The setting of the conversation is an important factor that could affect accommodation. As stated above, much of the past research has been conducted in a laboratory. Studying conversations in more natural settings could result in different patterns of accommodation. Aside from setting, other factors identified in past research as influencing communication between men and women include: status (a lower status individual will accommodate more to a higher status individual); security in the individual’s societal role; relationship with the conversational partner (shorter relationships exhibit higher gender differences); and perceptions of the self, partner, and the situation. Most research dealing with status indicates that women accommodate more than men in conversation because they are perceived as having a lower status. Specific factors studied in this research are listed in table 1. A 2003 study with children addressed the issue of perception in conversation. This study supported the idea that accommodation behavior in boys was mediated by their strong beliefs about gender roles. Specifically, boys with strong beliefs about
gender roles tended to accommodate less. Research done suggested that the gender of a conversant influences the conversation more than the gender of the conversational partner; one’s own gender perceptions more strongly influence what one is hearing, thereby influencing their response. Furthermore, research on gender salience has suggested that stronger salience of one’s own gender influences use of stereotypical masculine and feminine language characteristics as the situation or setting allows it.

In a 1988 study on conversational accommodation and male dominance roles, conversational patterns were observed via interruption rates. The study showed that women converged more than men in general (interrupted less and allowed interruption more), but accommodation varied over different factors such as utterance length, short and long pauses, back-channels (verbal or nonverbal communication facilitators used by the listener), and laughter. Another factor of accommodation includes regional dialect (or accent), which may even differ between genders of similar regions as described by Clopper and colleagues (2005). To better understand the process of accommodation, one must examine the gendered patterns males and females tend to follow.

**Masculine and Feminine Language**

The gendered patterns of speech can be examined via features of language identified as either masculine or feminine. Features of language identified as feminine include intensive adverbs (e.g., all, some, very, etc.), emotion words, questions, hedges, longer sentences, minimal responses (e.g., uh-huh, hmmm, etc.), and qualifiers, while features of language identified as masculine include self-reference, directive or imperative statements, terms of quantity (e.g., one, a dozen, etc.), and judgment adjectives (e.g., weird, unpleasant, etc.). In terms of self-reference, experiments show that men not only use the pronoun “I” more frequently but with shorter speech intervals between uses. Masculine language is often described as direct, succinct, and instrumental, while feminine language is described as indirect, elaborative, and affective. Women are also identified as having clearer speech and larger shifts in pitch within their speech. Furthermore, men are said to use conversation as a means to negotiate or achieve, using “task-oriented language,” while women are said to use conversation as a means to intimacy, using “emotion-oriented language.” In a 2008 study that utilized text samples and transcripts of conversations (though the gender of partners were not given) it was discovered that women used more psychological and social processes in language while men used more object properties and impersonal language. These general descriptions place a firm divide between masculine and feminine communication, which makes one wonder how members of the opposite gender could tolerate speaking to one another. However, we know that women and men do manage to communicate somehow and sometimes very well. The question is, how do they do this? The answer appears to be accommodation. Further study of this process is necessary to better understand it.

**Hypotheses**

Based on past research, I formed the following hypotheses:

H1. Women will exhibit more convergent accommodation behaviors and men will exhibit minimal accommodation.

H2. In conversations with stereotypically feminine conversation topics (relationships, emotions, and feminine strengths), men will exhibit some convergent accommodation behaviors.

H3. In high-stress conversations, both partners will exhibit divergent accommodation behaviors.
These hypotheses focus on how accommodation processes perform in male-female conversational pairs as a function of gender. The first hypothesis was intended to address, and possibly confirm, the conclusions of past research regarding general accommodation. The second and third hypotheses were intended to address specific factors affecting accommodation. The second hypothesis proposed in response to suggestions that conversations between male-male and female-female partners can in part be identified due to topic of conversation. A feminine topic could indicate that the female was the dominant conversational partner and may suggest convergent accommodation by the male partner. The third hypothesis tests the mood of conversation. The experience of emotional discomfort or stress may cause participants to become more entrenched in their opinions and thus more entrenched in their own gendered patterns of speech.

Method

An important factor of this research is the method of data collection. The majority of the research completed on conversational accommodation has taken place in a lab setting in which the participants are unknown to each other, in a foreign situation, and/or in a situation in which conversational topics are assigned or suggested by the researcher. The use of naturalistic observation is the key to offsetting the limitations of laboratory research. By studying accommodation patterns in a natural setting one can improve ecological validity, or generalizability to the real world. This study is a qualitative, or descriptive, research study. Unobtrusive observation techniques were used to collect data via observing participants without their knowledge and without interfering in the natural course of events.

Participants

This study consisted of a sample, chosen via convenience (no participant recruitment), of 26 participants (13 dyads), in which 13 participants were perceived as male and 13 participants were perceived as female. The participants were selected based on the factors of proximity, volume, and talkativeness (quantity of speech); participants who were not close enough to hear, not loud enough to hear, and not communicative enough to warrant recording were not observed. No demographic information was verified by the participants themselves (a limitation of naturalistic observation) and is merely based on the researcher’s observations. Participants were not aware of their participation in the study. Participants’ perceived ages varied between 18 and 65 years (M = 28.0). Based on their conversations and nonverbal cues, couples were described as having the relationship of friends (N = 7), dating (N = 4), or married (N = 2).

Procedure

After the Institutional Review Board approval was received on February 17, 2011, this study was executed as follows. Using a record sheet based on previous research, observations were recorded via pen and paper to allow the research to be done in as inconspicuous a method as possible. Recording of participants was completed using a self-designed record sheet based on information from past research and addressed the following: age, relationship, conversational mood, topics of conversation, location of conversation, time and length of conversation, incidence of feminine and masculine conversational indicators, and illustrative statements. The operational definitions of the recorded characteristics can be found in tables 1 and 2. Because the characteristics of masculine and feminine language were chosen based on past research they may unintentionally promote past stereotypes. While this method may be sufficient for the purposes of this study, a reevaluation of stereotypical language characteristics is
recommended for future research. The word *perceived* was used in the record sheet in an attempt to show that none of the information was verified by the participants themselves (a limitation of naturalistic observation) and was merely an interpretation by the researcher.

Locations were restricted to Oshkosh, Wisconsin, and De Pere, Wisconsin (cities in northeastern Wisconsin approximately 60 miles apart and both with high college student populations). Research was done in a variety of public locations categorized as dining ($N = 6$), sporting event ($N = 2$), or coffeehouse ($N = 5$) as described in table 1. Specific locations were chosen based on the likelihood that male-female dyads would congregate.

**Results**

Accommodation was calculated using the incidence of the conversational indicators. Individual accommodation was determined via the adherence (divergent accommodation) to or deviation (convergent accommodation) from gender stereotypical indicators. The incidence of an equal amount of masculine and feminine indicators (or slightly gender-adherent use of indicators) showed a lack of accommodation behaviors. Total accommodation was examined via a comparison of the total speech behaviors of the conversational partners in each conversation. The incidence of accommodation is shown in table 4.

Recorded conversations were mostly taken from a dining or coffeehouse location (84.6%) and recorded during the morning (38.5%) or afternoon (53.8%). It appeared that conversations that occurred in a more home-like atmosphere (e.g., university dining hall) were more relaxed and open. The time of day appeared to have no direct influence on accommodation processes. Length of conversation did not influence differences in conversational behavior.

The age of individual participants influenced the data in two distinct ways. In general, as age increased there was more adherence to gender stereotypes in the use of conversational indicators. In addition, a difference of age between partners in the same conversation accounted for more incidences of major accommodation when female partners were more youthful than their male counterparts. However, the small number of couples with this age difference might contest the significance of this result.

In general friendship couples showed less accommodation than dating couples; unfortunately the small number of married couples yielded no reliable conclusions from these results (see table 3). Results from this study (also shown in table 3) reveal that the majority of conversations were of a relaxed mood and had neutral topics (equal distribution of specific and variable conversations).

Conversational indicators (both feminine and masculine) were recorded for both the male and female participant; quantities of these indicators were compared in table 3. As can be seen in table 3, male participants did not deviate from the conversational norms suggested by past research (i.e., men did not use more feminine language than women). Also of interest is the high incidence of questions used by both male and female participants. As seen in table 3, however, female participants deviate from the conversational norms suggested by past research in the use of masculine language. Women in this study made more interruptions than men; moreover, it appeared that younger women made notably more interruptions than older women. In addition the use of self-reference by both men and women was similar.
Hypothesis 1

Women will exhibit more convergent accommodation behaviors and men will exhibit minimal accommodation.

Results showed strong support for the first hypothesis. According to the results listed in table 4, convergent accommodation attributed to the female partner in conversation occurred in nine of the 13 couples studied. In addition, equal convergence occurred in two of the 13 couples, which is convergent behavior by women, although this finding does not indicate minimal accommodation by men because their behavior is equally convergent. Only one of the 13 couples contradicted this hypothesis, in which the man exhibited convergent accommodation.

Hypothesis 2

In conversations with stereotypically feminine conversation topics (relationships, emotions, and feminine strengths), men will exhibit some convergent accommodation behaviors.

Results showed little support for the second hypothesis. Only one of the 13 couples used feminine conversational topics. In this conversation the woman exhibited minor convergent accommodation. In addition, in the four of 13 couples that used masculine conversational topics women also exhibited minor convergent accommodation. As shown by the results, the majority of conversations used neutral conversational topics (table 3). Lack of relevant conversations, due to the small sample overall, prevented any meaningful conclusions in this case.

Hypothesis 3

In high-stress conversations, both partners will exhibit divergent accommodation behaviors.

Results, or lack thereof, made the evaluation of the third hypothesis impossible (no valuable conclusions could be reached). Only one of the 13 couples exhibited an intense emotional mood (or high-stress conversation). In direct contrast to hypothesis 3, the woman exhibited major convergent accommodation in this conversation. Again, lack of relevant conversations, due to the small sample overall, prevented any meaningful conclusions in this case.

Discussion

Accommodation

Consistent with past research, women accommodated convergently toward male partners in the majority of situations within this study. This confirms much of the past laboratory research within the natural setting. In this study, men most often exhibited zero accommodation, while women exhibited minor convergence in most situations. As suggested by past research, this result may be caused by women’s lower societal status (women, in general, are still considered to be socially inferior to men); a natural desire in women to facilitate communication; or the fact that women are more attentive and thus more reactive toward accommodation patterns.

Factors Affecting Accommodation

The factors examined in this study included location, length and time of conversation, age, relationship between partners, conversational mood, and topic as listed in tables 3 and 5. While location did not immediately appear to influence accommodation behaviors, it did seem to influence conversational behavior in general. Within the more home-like setting of a university dining hall, participants seemed more likely to communicate openly. This phenomena would likely account for the single intense mood conversation occurring in such a setting.
Age was used in this study to examine two factors. First, age could be considered as a means of measuring status. Unfortunately, there were no pairs in which a male participant was younger than his female counterpart. However, in the two pairs in which a female participant was younger than her male counterpart, the woman was shown to exhibit convergent accommodation behaviors. This appears to be consistent with research suggesting that status influences accommodation behaviors. Second, age can be examined from a more general perspective in terms of differences between different age groups. Past research has suggested that sex-role definitions and social order influence gender differences in conversations. Overall, it appeared that as age increased, adherence to gender stereotypes in language use increased. This could be attributed to a change in social expectations; women are no longer expected to be as submissive to male partners as they once were. In a recent study using Internet blogs, gender differences in language use had significantly decreased. It has been suggested that women are more likely to be encouraged to use certain facets of stereotypically masculine language, specifically self-reference and interruptions. Research by Hannah et. al. (1999) suggested that women are more concerned with social approval and effective communication than adhering to social norms. This causes uncertainty about categorizing these features of language as masculine or feminine. On the other hand, it appears men may be encouraged to use stereotypically feminine language to a lesser extent than women are encouraged to use stereotypically masculine language. However, it has been noted that emotion-oriented language and task-oriented language usage by men and women may be a manner of preference rather than a socialized process. Research has found that women use emotion-oriented language because it is more useful to achieve their social goals, whereas for men, task-oriented language is more useful to achieve their social goals.

As far as the relationship between partners, it seemed evident that more accommodation occurred between partners with stronger relationships. In comparing relationships between friends and dating couples, dating couples showed more accommodation than friendship pairs. As stated earlier, there were not enough married couples in this sample to make a significant comparison. It could be expected that more accommodation occurs in married couples because the success of a conversation is more important in longer relationships. Misunderstandings could potentially damage the relationship in which both partners have invested time and effort. This gives incentive to use accommodation to modify conversational behaviors.

Mood and topic were the final two factors of accommodation studied here. In addressing the question of mood, the one conversation in which there was an intense mood showed major accommodation by the aggrieved partner (in this case a woman). This suggests that the threatened or angry partner may accommodate more, perhaps in an attempt to create understanding in the other partner. This is in line with research done by Hannah et. al. (1999) that suggests style of speech (facilitative, willing to communicate, or nonfacilitative, unwilling to communicate) is a better predictor of accommodation behavior than gender alone. Unfortunately, there was only one conversation in which this could be examined.

However, the topics of conversation offered an interesting result. In either the stereotypically masculine topics or stereotypically feminine topics, women exhibited minor accommodation. It appears, based on these results, that topics of conversation have little influence over accommodation behaviors, contrary to the suggestions of past research. This finding could be attributed to differing operational definitions of masculine and feminine topics or the small sample size. However, this finding may also indicate a failure of laboratory research to successfully recreate natural conversation topics (and natural settings) resulting in unintentional bias in past research.
Masculine and Feminine Language

In the realm of feminine language, participants in this study adhered to gender stereotypes. Within the area of emotion-oriented language, a 2008 study suggested that men and women may differ in the type and use of emotion rather than in the frequency alone. Men were found to use more negative emotions, whereas women were found to use more positive emotions. In research done on Internet blogs, it was shown that men used more emotion references or emoticons in mixed-gender newsgroups, showing evidence of accommodation. In the current study, however, men appeared to use significantly less emotion-oriented language; the specific use of this language was indeterminable based on the descriptive results. Because hedges and qualifiers were so similar in their definitions, they were combined in the analysis of the results. Qualifiers were more likely single words, which were more difficult to parse from conversations. This factor may account for the small number of hedges and qualifiers. Finally, questions accounted for the largest number of feminine conversational indicators for both male and female participants. In retrospect, questions may be divided into types more likely to be used by either men or women. It appears that men’s questions are used in order to gain specific information, consistent with literature suggesting that men are more task-oriented. On the other hand, women appear to use questions to facilitate conversation in general. These questions are often defined as “tag questions” (e.g., isn’t it?, don’t you?, really?, etc.) and are thought to express uncertainty and are used as a means of being polite. This is consistent with research stating that women are more concerned about producing intimacy and gaining social approval in conversation.

As far as masculine language, participants did not completely adhere to gender stereotypes. In the area of task-oriented language, there was strict adherence; thus, this appeared to be the top indicator for masculine language. This finding corresponds with past research on the topic. However, this study found that women used interruptions more than men. This is contrary to previous findings by Helgeson (2009) that may suggest a shift in social or conversational norms. In addition, the use of self-reference is shown as similar in both male and female participants. Again, this may suggest a shift in social or conversational norms and a necessity for future research to re-evaluate stereotypical conversational patterns. Finally, within direct or imperative statements there may be a great deal of overlap into task-oriented language. A command that directs the conversational partner toward a specific goal would fall into both categories (e.g., “Give me your fork, I want to taste your dessert”). Thus, the difference in quantity of usage in direct or imperative statements between male and female participants is similar to the difference in quantity of usage in task-oriented language.

Overall, the conversational indicators examined suggested masculine indicators were used more frequently than feminine indicators. This may be attributed in part to changing conversational norms, but is more likely attributed to the high rate of female accommodation.

Conclusion

In conclusion, women, in general, exhibit more convergent accommodation behaviors in relation to male conversational counterparts. However, topic of conversation did not seem to affect accommodation behaviors and conversational mood affected accommodation behavior in direct contrast to expectation. Overall, men and women appeared to adhere to gender stereotypes, with the minor exception in the area of self-reference. Furthermore, as age of partners increased, adherence to stereotypes appeared to increase as well. In a comparison of the relationships between partners, friends appeared to accommodate less than dating couples; unfortunately, the number of married couples was too small to draw any meaningful conclusions. In a comparison
of couples (two couples in which the man appeared slightly older than the woman) with
differing ages, again, the sample may be too small to draw any meaningful conclu-
sions, but may indicate greater accommodation by the younger partner (in this case
both women). In addition, conversational setting appeared to influence conversational
behavior rather than directly affecting accommodation behaviors; more home-like or
relaxed settings resulted in more relaxed and honest conversations. Length and time of
corversation had more influence on the collection of data than on the object of study itesel.

Limitations
The limitations of this study are mainly focused in the method of data collection. Because of
the sheer number of points of interest being recorded (in order to gain a
better picture of the conversation as a whole) and method of collection (pen and paper)
human error is likely. Information may have been misheard, misrecorded, or miscoded.
In the future this could be avoided via use of a recording device and subsequent coding.
In addition, the small sample size limits generalizability of this study. Furthermore, the
sample came from two college communities in a small area of northeast Wisconsin,
further limiting generalizability of this study. Larger and more varied samples would
avoid these limitations.

This study was further limited by the use of category labels used in prior
research. While these labels may be sufficient to describe masculine and feminine
behavior in this case, they are severely lacking in accuracy. The description of mascu-
line and feminine language must be reevaluated to avoid further promotion of inaccu-
rate stereotypes in research.

Implications for Future Research
This study has implications for future research. Research of this kind (natural-
istic observation) is necessary to confirm or disconfirm laboratory results in experi-
ments of a similar nature as well as to confirm results of the current study. A focus
on nonverbal as well as verbal indicators in conversation may be valuable for future
research. Laboratory research, specifically, may want to increase focus on many of
the items this research has brought to light (e.g., topics of conversation, relationships,
and changing social norms). Research of this kind may attempt to include a variety of
relationships between partners (friends, dating, married); use specific task-oriented or
emotion-oriented goals to direct conversations in a masculine or feminine manner; and/
or enhance feelings of animosity or attraction prior to conversations in order to artifi-
cially create high- and low-stress conversations. In addition, it is important for future
research to consider the accuracy of masculine and feminine characteristics of language
as currently described. It could be more valuable to consider the circumstances and
type of person likely to use these features of language rather than depend on gender as
the sole organizing characteristic.

Overall, a more intense and thorough study of accommodation processes and
influencing factors is necessary to reach definitive results. It remains a point of interest
to study the way men and women communicate. Further research may offer greater
understanding and thus lead to enhanced communication between members of opposite
genders. The subtle differences between “I’m not finished” and “Can I finish” offer an
important insight into these communicative differences and the fundamental differ-
ences between men and women.

A Movement Without a Face: Anonymity and the Push for Women’s Rights in 1800s America

Sara Willkomm, author
Dr. Gabriel Loiacono, History, faculty adviser

Sara Willkomm graduated from UW Oshkosh with the distinction of cum laude in May 2011 with a B.A. in history. Her research regarding women’s rights was conducted as part of her senior thesis. Sara returned to school at UW-Milwaukee in fall 2011 to pursue a degree in economics.

Dr. Gabriel Loiacono is an assistant professor of history. He received his Ph.D. from Brandeis University in 2008. His research focuses on the Early American Republic and paupers.

Abstract
Despite the plethora of research compiled regarding the beginning of the women’s rights movement in America in the mid-1800s, only a small number of historians have looked beyond the convention held in Seneca Falls, New York, in 1848. Although this convention brought the women’s movement into the limelight for the first time, strides were being made in the decades prior. This study sheds light on the 20 years prior to the convention and the legal and social advances that had been made in regards to women’s rights within marriage and society as a whole. Using newspapers and letters from the time, as well as secondary historical sources, my research details the hard work of lone liberators prior to the movement gaining a face in 1848.

“The rights of men, and the rights of women. . . . May the former never be infringed, nor the latter curtailed.”1 This toast, spoken by men in the years following the Revolution, reveals an air of optimism regarding gender equality. With hearts full of new-found nationalism and relief over victory in the Revolution, Americans of both genders were willing to cooperate with one another in the hopes of bettering the nation. However, after the dust had settled and normalcy resumed, the optimism that had once brought men and women together and inspired toasts throughout the country was now fleeting. Women began the decade with the hopes of advancing their status, having participated informally in the Revolution. Men, having just set in stone the new rules for the country, were eager to take their places in government and have women run the home front. While men struggled for normalcy and a sense of equilibrium, some women hoped to take advantage of the temporary chaos and break the ties that had bound them for so long. It was in the early 1800s, in the midst of the nation’s fresh start, that the women’s rights movement in America gained steam. Using anonymously written newspaper articles, group meeting synopses, court hearings, and secondary sources, this research focuses on the 20 years prior to Seneca Falls and provides a glimpse of a movement gaining steam in these decades.

The turn of the nineteenth century ushered in a new age of industrialization and a new sense of independence for women. Industrialization brought women from their sphere of the home into the gritty factory scene. While employment had the potential to liberate women from traditional gender roles, coverture laws of the time prevented the income from going into the pocketbook of its rightful owners. Under coverture laws, women and men became one when they married and all assets and legal power
went to the husband. As the century progressed, the coverture laws began to ease. The 1830s saw the passage of the first Married Women’s Property Law, the pioneer issue of *Liberator* (an abolitionist newspaper), and the foundation of the Female Anti-Slavery Society. The following decade began with women being barred from the Anti-Slavery Convention in London but ended with the women’s rights convention in Seneca Falls, New York.

The conference in Seneca Falls often is deemed the beginning of the women’s rights movement in America. Katherine Sklar’s *Women’s Rights Emerges From the Anti-Slavery Movement in 1830-1870* has a chapter titled, “An Independent Women’s Rights Movement is Born, 1840-1858.” This book, like many others, puts all of the force behind the movement into the context of the 1840s. The difference between the 1848 convention and the decades prior lies in the organization of its participants. While the women who gathered in Seneca Falls had formed a semi-cohesive movement, women prior to this convention were acting in relatively local spheres, rather than on a national or international level. This is not to say that they did not empathize with the other women in similar situations; pre-Seneca Falls activists were simply lacking vocal leaders such as Lucretia Mott and the Grimke sisters, who would be seen in later decades. Despite their lack of national organization, pre-women’s movement activists still fought for the cause and made substantial gains. Newspapers from the time show the change in public opinion regarding women’s participation in the social sphere, from defiance of coverture to women-only organizations to collaborative efforts in the fight against slavery and for temperance. Prior to Seneca Falls, local court cases and anonymously written newspaper articles show support from average Americans, starting a grass roots movement supporting greater rights for women.

Other historians have tackled the issue of exactly when the women’s rights movement in America started. Rosemarie Zagarri, author of “The Rights of Man and Woman in Post-Revolutionary America,” believes that the movement started much earlier, “in the wake of the American Revolution and...after the publication of Mary Wollstonecraft’s *Vindication of the Rights of Woman*” in 1792. The success of Wollstonecraft’s book translated into “discussions of women’s rights long before there was an organized movement to mobilize their sentiments.” The publication of *Vindication of the Rights of Woman* introduced new terminology, such as “women’s rights,” that the American public could now use to discuss women. Although Wollstonecraft’s book finally gave the American public the proper terminology, coverture laws were still too deeply embedded in American culture to spark the creation of a full-fledged movement. Zagarri points out that women even had the right to vote in New Jersey up through 1807 but “women apparently voiced no public protests” when their voting abilities were stripped from them in that state. It wasn’t until decades later, when the yoke of coverture began to slip, that American women finally reached the point of no return, when popular opinion began to sway in their favor and women’s public speaking was met with slightly less indignation.

The nineteenth century started out, like the century before, with laws of coverture, including property and income rights that made women subordinate to their husbands. Under coverture, women could not own property, participate in the legal realm such as contracts, or sue or be sued. *Feme soles*, or single females, still retained the same property rights as men, but in most cases lacked the voting, jury, and military rights men had. If these single women married, they became *feme coverts*, or “covered women,” and their rights passed to their husbands, who now held all of the legal rights for the family. Due to social stratification at the time, coverture laws only applied to middle-class white women. Lower-class women frequently entered into marriages that were not concerned with “his and hers” property, as there was not enough property to
go around. Women in these marriages frequently were employed, either as domestic workers or in factories, out of necessity, not out of a sense of female entitlement. In the case of married middle-class women, court cases such as *Cole v. Van Riper* stated, “It is simply impossible that a woman should be able to control and enjoy her property as if she were sole, without practically leaving her at liberty to annul the marriage.”5 Men within the government worried that if women were given the liberty of property rights and the ability to take possession of their own income, they would ruin the institution of marriage and chaos would erupt. According to Hendrik Hartog, “... to recognize a wife’s capacity to represent herself was to imagine the end of marriage.”6 Without economic dependence on their husbands, what incentive would women have to stay?

Participation in the employment sector was met with similar uneasiness. Again, men feared that if women were working in factories or as domestic servants, their work within the domestic sphere would suffer and this would reflect badly upon their husbands. Representing a common view of the day, one man noted, “the two sexes are constructed and intended for different purposes. Man may enter a woman’s and a woman man’s, but ‘revolting of the soul would attend this violence to nature; this abuse of physical and intellectual energy; while the beauty of social order would be defaced and the fountains of earth’s felicity broken up.’”7 Some saw the separate spheres as a religious notion, others as a social responsibility, and finally, some saw the women’s sphere as a physical necessity. *The Southern Literary Messenger*, a Virginia-based periodical, stated in 1835 that women could never be physicians, lawyers, or statesmen because “to succeed at all, she would be obliged to desert the station and defeat the ends for which nature intended her.”8 This argument synthesizes all basic arguments in favor of separate spheres: if women are not in the home, not only are they neglecting their motherly duties, they will also be physically incapable of doing much else. The separate spheres mentality was the status quo for gender roles, and the defiance of it when women entered the labor force made many uneasy. *Godey’s Lady’s Book*, one of the most widely circulated magazines for women at the time, popularized the term “Cult of Domesticity” to refer to this widely held belief.9

Within the notion of separate spheres, women and men were expected to have certain characteristics representative of their genders. Just as working outside the home and receiving a higher education were deemed “manly,” emotions, sentiments, and actions also had a gender. Men were materialistic, aggressive, vulgar, hard, and rational.10 Women, on the other hand, were supposed to be moral and stable and provide a place of serenity for their husbands, so men could have a temporary break from the insanity of the cruel, dirty, and busy masculine world. As for aspirations in life, “Men have a thousand objectives in life—the professions, glory, ambition, the arts, authorship, advancement, and money getting ...”11 Women’s aspirations consisted of providing a warm home full of leisure for their husbands and families. If she “succeed not in the one sole hope of her hazardous career, she is utterly lost to all the purposes of exertion of happiness, the past has been all thrown away, and the future presents nothing but cheerless desolation.”12 This outlook of doom and gloom was the result of an ingrained notion of separate spheres that dictated a lifestyle of servitude for women and pressure to succeed as mothers and wives. With the separate spheres mentality so pervasive in society, women felt as though their only hope to succeed was in their career as mothers. If they should fail, not only would society stigmatize them as failures, but their inability would carry on with them into the desolate future.

According to the *Independent Statesman*, love carried similar standards based on gender. “Love is only a luxury to men, but it may be termed a necessity to women, both by the constitution of society and the decrees of nature, for she has endowed them with superior susceptibility and overflowing affections, which, if they be not provided
with a vent, perpetually corrode and gnaw at the heart. And what are her feelings and chances in this fearful lottery? A constant sense of degradation, in being compelled to make her whole life a game, a maneuver, a speculation; while she is haunted with the fear and shame of ultimate failure.”13 For men, love was optional. Since they had incomes but few expenditures while single, a wife was not a necessity. Women, on the other hand, earned little to no income, forcing them to be dependent on a male breadwinner. This, plus the societal expectation of marriage at a young age, forced women into marriage with the weight of the world on their shoulders. The author of this article, though his or her gender is unknown, has much to say regarding societal expectations for women versus men. Despite a lack of outward disapproval, woven into each sentence is a warning. Verbs such as “corrode” and “gnaw” foretell consequences for women if they did not properly maintain their households or sufficiently provide comforting homes for their husbands.

In the 1820s, men were still the sole authority regarding property rights. Although many felt that the nineteenth century was an “age of innovation; in which all the received notions of justice and government are to be supplanted,” a bill was being introduced in Georgia in 1827 that would “enable the husband, under any circumstances, to dispose of his real estate without consent of his wife, as far as regards the right of dower or thirds.”14 Dowers, or morning gifts, traditionally could not be touched by the husband, as they were intended to provide for the wife should she outlive the husband. Since the laws of coverture gave all property and possessions the woman had prior to marriage to the husband, dowers were “intended as a kind of equivalent for those vested rights which the husband received in virtue of his marriage. Indeed, without the right of dower, the wife will be left without the least guaranty against the profligacy of the husband. . . .”15 Although a lack of property rights for women was customary in this time period, this Georgian law hoped to take away further rights, including her security in widowhood and her right to one-third of her husband’s real estate. Even though this law had nothing to do with the women of Maryland, the author of the article in the Baltimore Chronicle, the original source, felt that the law was a “contagion [that] may be wafted within our borders, and we shall be obliged to use a curative, instead of a preventative.”16 Sympathetic reporters worried that the new anti-property rights act would spread like a virus and would need to be dealt with as such.

Other states “were accepting the idea that a woman should be given the legal ability to support herself, particularly if her husband were a debtor.”17 These supportive states and their decision in the 1820s began the slow movement toward liberation. Although some states’ ideologies reflected past notions of gender divisions and separate spheres, public opinion was beginning to show sympathy for women in loveless marriages that left them prey to reckless husbands. Several court cases ruled in favor of women having separate spheres, provided it did not throw off the power balance or threaten the unity of marriage. In New York, the case of Kenny v. Udall and Kenny ruled that due to the “dishonest behavior of her husband,” Mrs. Kenny’s property should be placed in a separate estate so as to protect her.18 Regulations on wills and inheritance of property were slowly becoming more lax and allowing inheritance for women or with the help of appointed trustees. Courts began to rule in favor of women who were forced into unfortunate circumstances by debt-prone husbands, and then were left with little money. Women’s loss of property due to coverture made courts feel sympathetic to women and more apt to grant them settlements.

This new tide of sympathy left women with more control over property and less susceptibility to the whims of a drunken husband. Lending a helping hand to women’s property rights was the temperance movement, which gained steam along-side the new waves of religious fervor in the early 1800s. Both men and women were
involved in the temperance movement and though they joined for different reasons, both helped to boost the movement and bring attention to the rampant alcoholism that was both morally and monetarily draining families. Thanks to the efforts of the temperance movement, alcohol consumption was reduced from five gallons annually per capita in 1830 to less than two gallons just ten years later.19

While American courts were dealing with the ownership of properties within marriage, the House of Commons in Great Britain was discussing the legality of women signing political petitions. The Commercial Advertiser, a newspaper based in New York, reported the story, followed by its own interpretation of the Speakers’ actions. The Speaker of the House ruled that he saw no reason or law that would prevent women from signing petitions for the House. The Advertiser then added in brackets, “[It may be remembered that during the recess the Speaker married.]”20 The author of this article clearly thought that the Speaker’s recent marriage had left him susceptible to the whims of a woman, thereby altering his judgment in favor of women’s rights. At the time this article was published, Britain was in the process of passing the Representation of the People Act. This act, which finally passed in 1832, stated blatantly that voting rights would go to males, making it legally binding that only men could have suffrage. This terminology ignited the fire that started the women’s rights movement in Britain and gave hope to women in America just beginning to assemble.

Although women in the 1820s were slowly being allowed to keep money and possessions after the deaths of their husbands or in light of unfortunate circumstances, little changed regarding their own possessions during marriage until the next decade. In an article published in the Norfolk Advertiser, a Massachusetts-based newspaper, the author of an article titled “The Rights of Woman” questions why women are paid so little and why so few men help to resolve their predicament. “The world is a scene of violence, where every man scrambles for his share of plunder; but weak woman is constrained by her physical inferiority to stand apart and gaze hopelessly, with little to sustain her or her little ones, but the stray fragments that may fall in her way.”21 The article focuses on the toil of women and the double standard that existed between male and female workers. “The widow may toil with superior assiduity and receive less than the tithes of the wages of man—and who strives for her? Is her labor less useful or necessary. [sic] By no means. Are her orphans any more readdy [sic] or cheaply sustained than the children of the labourer [sic]? Of course they are not. Yet she is allowed to toil unnecessarily, and receives a pittance which, if quadrupled, would be spurned by a male labourer [sic] with spurn?”22 The article asserts that while women’s work is equally important and comparable to men’s, women are still only paid a fraction of a man’s wage. She is then expected to provide for the whole family with her low stipend from her husband and the pittance she earns, all while putting on a façade that the pittance is sufficient.

The author then questions why there is such a dichotomous nature between labor, representation, and gender. “But who, we ask again, who strikes for the lone widow? Who compassionates her wrongs and asserts her rights? Perhaps it may be asserted that women have no rights. Men are entitled to high wages, but women should not expect it! Men must not labor more than ten hours, but women may toil day and night! Might makes right, and the woman, being weak and unable to demand her fair share of the advantages that result from labor, must consent to be as she has been, the drudge and slave of those who prate about her beauty and their chivalry.”23 This article says two important things regarding the view of women at the time. First, it shows that people are seriously acknowledging all of the work that women do. The author clearly believes that women’s work is of value and should receive adequate compensation.
His or her argument is this: how can a woman sustain herself and her family if she is paid only a mere pittance and forced to rely on her husband who enjoys all freedoms and earns a sustainable wage? Secondly, the article makes it clear that sexism remains. Although the author believes that women are capable of doing work and running a household, he or she does not hesitate to repeatedly refer to women as weak. Within the article, the author uses “weak,” “lone,” and “in need of defending” to describe women. Rather than asserting the strengths of women, the article focuses on how men are needed to step in and help women to initiate their own fight for rights. This article is both forward-thinking and stuck in sexism of the past. The reprinting of this article by other newspapers shows that the notion of weak women resonated throughout the United States.

The pre-women’s rights movement had been evolving for a decade, but was missing a vocal, unwavering spokesperson. In 1831, William Lloyd Garrison, the outspoken abolitionist, formed his influential newspaper *Liberator*. During this time, abolitionist groups, some open to both men and women, began springing up throughout the country. Garrison encouraged women to become involved in both his movement and the women’s rights movement. His belief in the involvement of women in both political movements shows that the spark had been ignited regarding women’s participation.

Much like Garrison’s intertwining of abolishment and women’s rights, during the nineteenth century social change groups would often become enmeshed with one another. The same women who were fighting for increased property rights also often fought for the abolition of slavery and the prohibition of alcohol. Many women, fed up with scrounging for money for food while their husbands spent late nights at the local bar, retaliated in a variety of ways, often with violence toward their husbands or through joining the temperance movement. Many social organizations gave women a voice that had previously been silenced. Unfortunately, while Garrison believed in the cohesiveness of these groups because “he appreciated the substantial impact that women’s experiences, beliefs and work could have on public opinion, political issues, and the rehabilitation of nineteenth-century American culture,” many disagreed.24 The *New York Spectator* recounted the minutes of a New England Anti-Slavery Society meeting in which the participation of women was being discussed. Miss Kelley, one of the female attendees, argued that “the creator has as much right to put a soul into a female frame as into a male frame, and that the abolitionists should take the yoke off the heads of females, before they break the chain from the negro’s heel.”25 Although Kelley participated in both the abolition and women’s rights movements, she prioritized the rights of females. At the end of the article, the author predicts another split within the abolitionist movement, this time between those for and against the participation and rights of women.

One year later, in 1839, the participation of women within the Society was still being debated. The argument by the opposition this time was that “they [women] neither enrolled their names as members, nor did they sign the Declaration of Sentiments; that such a claim had never been made or recognized in the society before; that for women to take as active part in such an assembly was contrary to the generally received roles of propriety. . . .”26 Members of the Society who supported the participation of women used the Constitution of the Society as evidence. According to their Constitution, the only requirements for membership were that the person “consent to the principles of the Constitution, . . . contribute[s] to the funds of the society and is not a slaveholder.”27 The supporters of women’s participation argued that because women fit all of the qualifications, they should be able to vote within the Society. But even many forward-thinking abolitionists did not see the wealth of information and experience that women could bring to the table.
Although some groups allowed women, many men still felt that women were too emotional to participate in politics. At the time, women’s voices in public extended only so far as speaking to other women or slaves, whom men considered to be at an equal or lower level than the women themselves. Abby Kelley, the abolitionist and feminist mentioned previously, toured with Frederick Douglass, an African American who shared her anti-slavery and pro-women’s rights attitudes. Kelley took advantage of the rare opportunity to speak in public and kept the issue of women’s rights out of her speeches so as not to anger her audience. The Grimke sisters also spoke in public regarding the anti-slavery movement. While Kelley and Douglass spoke solely of the abolitionist movement while on tour, the Grimkes combined their views and encountered problems. The Grimkes held the audience’s attention, but when the notion of equality for women was addressed, abolitionists in the audience grew restless and discontented. As Angelina Grimke said in a letter to Theodore Weld, a fellow abolitionist and her future husband,

You seem greatly alarmed at the idea of our advocating the rights of woman . . . These letters have not been the means of arousing the public attention to the subject of Womans rights, it was the Pastoral Letter which did the mischief. The ministers seemed panic struck at once and commenced a most violent attack upon us . . . This letter then roused the attention of the whole country to enquire what right we have to open our mouths for the dumb; the people were continually told “it is a shame for a woman to speak in the churches.” Paul suffered not a woman to teach but commanded her to be in silence.28 Clergy were outraged by Grimke’s entrance into the public sphere. Her unwavering speech angered the clergy and abolitionists who thought that women should push for abolition but keep their feminist sentiments within the confines of feminist groups or, ideally, to themselves. Grimke grew angry toward the middle of her letter. Unlike Kelley, who was allowed to speak, Grimke had encountered men who told her that women were out of their sphere even when “we circulate petitions; out of our ‘appropriate sphere’ when we speak to women only; and out of them when we sing in the churches. Silence is our province, submission our duty.”29 Grimke argued in the postscript of her letter that “We never mention women’s rights in our lectures except so far as is necessary to urge them to meet their responsibilities. We speak of their responsibilities and leave them to infer their rights.”30 The Grimkes’ goal was to encourage women to acknowledge their lack of social rights and that the fight was their responsibility.

In the later half of the 1830s, while Garrison was publishing his newspaper and the Grimkes were sparking fury amongst fellow abolitionists, property rights laws began to make their way through the legal system. The first Married Women’s Property Act was passed in Mississippi in 1839. This pioneer act reflected previous concerns regarding women’s property being taken away because of their husbands’ debts. The Married Women’s Property Act protected women from having their property seized by creditors and gave them access to income gained from the property. This act was in the same vein as previous court cases, such as those in New York and Virginia, which had ruled in favor of dependent women. Despite these advances, the act still left men in charge of buying, selling, and managing any property, leaving much unchanged. The act protected women without granting them any rights that would detract from the rights of their husbands or other males.

The same year as the passage of the Mississippi Act, The North American copied an article from The Bangor Whig. In the same spirit as the Married Women’s Property Act, the staff at The Bangor Whig “advocate[d]...the propriety of extending to women the privilege of making proposals in preliminary matter pertaining to matri-
monial engagements.” While many of the Property Acts focused on women retaining property after marriage, the staff at *The Bangor Whig* was advocating rights for women prior to engaging in marriage. These rights would allow women to have more participation in marital arrangements, and women would have greater say in dowry, morning gifts, and life after the marriage had been initiated. When combined with the new rights gained in various property laws, women would have the opportunity to be more vocal and secure through every stage of marriage, from engagement to widowhood.

Mississippi’s Act stood alone until 1848 when New York followed suit. Even though the Act did not pass until 1848, articles as early as 1837 anxiously discussed its introduction. News regarding the introduction of the Act was published in many newspapers, including *The Philanthropist, Newport Mercury, The Cleveland Messenger,* and *The Patriot and Democrat.* According to *The Patriot and Democrat,* the New York Property Act would work “for the promotion and preservation of the rights and property of married women!” The first section of the act would give “…all estate, real and personal, belonging to a woman at the time of her marriage, who shall be married after the date of this law, and all the estate which she may afterwards acquire by inheritance, gift, bequest, or devise, shall continue vested in her after marriage; nor shall such estate, or the rents or process of it insure to the husband during the life of the wife, without her consent.” The proposed version of the New York Married Women’s Property Act went above and beyond the act in Mississippi. The Married Women’s Property Act from Mississippi was mainly focused on slaveholding, a vital part of Southern economy, whereas the proposed act from New York allotted additional freedoms to women. Not only were they allowed to retain all property from before the marriage, which normally would belong to the husband under coverture laws, they were also allowed to keep any property they acquired after the marriage.

The major difference between the Mississippi Act and the first section of the New York Act was that in the proposed Act from New York men were not allowed to tamper with a woman’s portion of the estate without her consent. The Mississippi Act still granted males full control over buying and selling rights of the property. According to the second section, the husband was “entitled to so much of his wife’s property, at her death, as by the laws of the state the widow is now entitled to at the time of his demise—in other words, he shall have dower.” As seen in the previous Georgia law, dowers were originally to protect women in widowhood and ensure their economic stability. The proposed New York Act would have enacted semi-equality regarding the loss of a spouse. Unlike the law in Georgia, this Act did not attempt to take the dower away from women. The final section of the proposed Act “prohibits married women from making conveyance to their husbands of any real or personal estate, except the income thereof, without the permission of the Chancellor.” This section prohibited women from handing their property over to their husbands, most likely to protect women from unfair deals or debtors.

While many of the newspapers simply reported the sections of the Property Act that had been introduced, *The Philanthropist* took a more opinionated stance on the issue. Reprinted from *The Cleveland Messenger,* the article used religion to support the advancement of women’s rights, similar to Abby Kelley’s argument. “Though christianity [sic] has done much for the female sex, and restored them many lost rights and privileges, still it is a humiliating fact that in christian [sic] lands, woman has far less freedom than justice and humanity demands.” The author of “Rights of Women” was clearly distressed that so little had changed for women even in civilized nations. According to the unnamed author, the new Act “commends itself to the common sense of and conscience of every enlightened citizen who will examine it.” The author understands that men and women supposedly become one flesh when they are married,
but does not believe that this should “not in any such sense as to destroy the personal identity of each.” The author of “Rights of Women” believed that laws should ensure the protection of all women’s property and that the division of responsibilities by sex needed to end. It was the hope of The Cleveland Messenger that “such a law . . . will soon be enacted in every state in the Union, and in every nation on Earth.”

Although this was a lofty goal, the tide had been gradually turning toward women’s legal emancipation over the past decade, making these attitudes popular and their aims plausible.

Amidst the buzz of the newly proposed New York Property Act, a future fore-runner in the fight for women’s rights in America was gaining momentum. Lucretia Mott, a Hicksite Quaker born in Massachusetts, began her political participation as a part of the abolition movement. After being denied entrance into other anti-slavery societies due to gender, Mott founded the Philadelphia Female Anti-Slavery Society. Mott became friends with William Lloyd Garrison in the early 1830s, as Garrison was gaining fame for his organizations and newspaper. Their friendship would propel her to the forefront of the movement and make both of their names synonymous with radical change. Years later, Mott would challenge the sexism of abolitionist societies. After facing rejection and disappointment, Mott and others felt it was time for women to have their own convention, separate from the drama of the abolitionist movement.

In May 1837, Mott, along with 200 other women, helped organize the first female anti-slavery convention in New York. This so-called National Petticoat Convention was the topic of conversation in numerous newspapers. In an article published two months after the event, The Commercial Advertiser applauded the efforts of the women involved. The Advertiser was also impressed with the spread of women’s rights movements across the globe. “Europe is getting on right ground upon the subject. England has changed her gouty old king for a queen. Portugal has done the same; and Spain would follow the example, were it not for that obstinate old rusty-fusty, Don Carlos.”

In 1837, Queen Victoria was crowned and so began the Victorian Era in British history, marking female rule across the Atlantic. The Commercial Advertiser supported the efforts abroad and was happy to see this change in attitude being reflected in the United States.

It was in the late 1830s that women like Lucretia Mott and Elizabeth Cady Stanton began to make their presence known throughout the United States. Not surprisingly, many men opposed their participation within the public sphere and their activity within the movements. Unfortunately for the men, who opposed the participation, Mott, Stanton, and Kelley refused to be silenced by sexism. The 1840s ushered in a new decade that would see even greater gains in the domain of women’s rights. New York finally passed its Married Women’s Property Act, and in 1848 a conference was held in Seneca Falls, New York, that gathered hundreds of women and their supporters to bring suffrage and equality for women to be “laid before the public.”

Seneca Falls resulted in the culmination of efforts known as the Declaration of Sentiments, a woman-centered version of the Declaration of Independence devised by Elizabeth Cady Stanton. Naturally, the convention was met with a “torrent of sarcasm and ridicule from the press and pulpit.” Seneca Falls, for the first time in the history of the movement, added the cohesiveness of a large group to the push for liberation. The group now had a solid following with one goal. Prior conventions had to deal with rifts between members and leaders as well as opposition between temperance, abolitionism, and women’s rights. Starting in 1840, the movement gained the momentum it needed thanks to vocal leaders that it had been lacking. The widespread recognition that was gained at Seneca Falls led many to believe that the women’s rights movement in America began in 1848.
Rosemarie Zagarri, in her book *Revolutionary Backlash: Women and Politics in the Early American Republic*, states that, “The period between the American Revolution and the Seneca Falls Convention of 1848 appears to be nothing more than a frustrating hiatus in the development of women’s rights.” Although Zagarri agrees that women were actively seeking rights prior to 1848, she argues that women’s ability to participate in the public sphere ended in the 1820s. The Revolution did open doors for women, allowing them to informally participate in the political scene; however, this foothold was lost shortly thereafter, as was seen in New Jersey. It was not until decades later, in the 20 years prior to the convention, that women began a larger push for a movement. These women, though nameless and unassembled, fought for the passage of laws and the lifting of coverture. The women of the late eighteenth century, those mentioned in Zagarri’s article, were still too deeply embedded in a society not ready for women’s equality. According to Nancy F. Cott, author of *The Bonds of Womanhood: “Woman’s Sphere” in New England, 1780-1835*, the coverture system gave women one domain that they could feel proud of, the home, and as a result some sense of power. The quality of their work within the home could boost their esteem and lead to some comfort within the constraints of coverture. Thirty years later, however, coverture laws had begun to ease and women found it less difficult to shake off the chains that bound them and finally became vocal in their quest for equal rights.

When the 1800s started, women were not present in the workplace or the political sphere, marriage transferred a woman’s possessions from her father to husband, and property rights for women were almost non-existent. From the turn of the century until the convention in Seneca Falls, women made remarkable gains in almost every category. Mississippi women saw the passage of a property act almost a decade before any state in the North granted women such rights. Court cases in New York and Virginia granted women protection from debt-prone husbands, allowing them more financial security. Of course, in the latter half of the 1830s, famous abolitionists and women’s rights proponents like William Lloyd Garrison and Lucretia Mott came on the scene. However, without the help of nameless women fighting for legal and social equality, the forward-thinking attitudes of people like Garrison and Mott would never have propelled the movement in the way that it did. The convention in Seneca Falls would not have been plausible if it had not been for the social gains that resulted in the collectivity of the movement.

Over the first half of the nineteenth century, the movement grew as the yoke of separate spheres was slowly removed from women’s necks. This decay of the separate spheres mentality allowed women to come out of hiding and profess their desire for independence and enabled future proponents to come out and speak in favor of the movement, creating the propulsion that made Seneca Falls possible. The turning tide of public opinion, as vocalized through local newspapers, created an atmosphere welcoming enough to draw women out into the open and the issue to the headlines. The loosening of social restraints allowed women to leave the private domain and make their way into the political sphere, one organization at a time. This new freedom fostered the collectivity of men and women that resulted in Seneca Falls which, in the end, was the catalyst the movement needed to succeed.

Effect of Text Messaging Bans on Fatal Accidents

Michael Beaupre, author
Dr. Chad Cotti, Economics, faculty adviser

Michael Beaupre is senior at UW Oshkosh studying marketing and economics. His research began as a paper for a course examining econometric methods. He will graduate with a B.B.A. in marketing and economics in May 2012.

Dr. Cotti earned his B.S. from UW Oshkosh, his M.P.A. from the Robert La Follette School of Public Policy at UW-Madison, and his Ph.D. from UW-Milwaukee. He teaches labor economics, health economics (undergraduate- and graduate-level) statistics, econometric methods, and graduate-level managerial economics.

Abstract
Do text messaging bans make roads safer? To determine the answer to this question, a multivariate regression model was developed to determine how fatal accidents by state were affected by the following variables: texting bans, cell phone bans, primary versus secondary enforcement, time since bans were passed, vehicle miles traveled per state, gas and beer tax per state, percentage of population under 25 years of age, population density, and unemployment rate. The results indicate that text messaging bans do decrease fatal accidents and also decrease the danger of driving as the vehicle miles driven increases.

Introduction
In 2010, 2.1 trillion text messages were sent in the United States alone (CTIA 2011); that is more than 66,000 every second! Texting has become a staple of everyday life, and for many people not even driving in a car can stop their text messages from hitting the airwaves. Scientific studies have shown how dangerous texting is while driving, and many states have responded with bans on texting while driving.

Washington was the first state to do so in 2007. Today 30 states and Washington, D.C., have texting bans on all drivers, and eight states have partial bans. With all these bans in place it is logical to question if these bans are doing what they were intended to do—are text messaging bans making roads safer? This is an important question because what is the purpose of a piece of legislation if it has no effect on the people it was made to protect?

This study is a cross-sectional comparison of states that have bans to states that do not. Variables considered include roadway fatalities by state, texting ban, other cell phone usage bans, primary versus secondary offence, population density, miles traveled on state roadways, blood alcohol content of drivers, beer and gas taxes, unemployment rate, and length of time the ban has been in effect. This data was collected from the U.S. Census Bureau (2011), the Fatality Analysis Reporting System (FARS; 2011), and the Insurance Institute of Highway Safety (2011).

Literature Review
Since the cultural adoption of cell phones, there have been multiple studies on the effect of cell phone use on automobile accidents and distracted driving. Wilson and Stimpson (2010) examined trends in distracted driving fatalities and their relationship to cell phone use, specifically texting volume, between 1999 and 2008. In this study, data were obtained from the Fatality Analysis Reporting System (FARS), which records data on U.S. public road fatalities. Wilson and Stimpson (2010) looked specifi-
cally at distracted driving fatalities, which are accidents in which drivers were inattentive, careless, or using cell phones, computers, fax machines, onboard navigation, or heads-up display systems. This data was compared to cell phone subscriber data from the U.S. Federal Communications Commission’s Wireline Competition Bureau as well as text messaging volume data from Commercial Mobile Radio Services Competition Reports. Wilson and Stimpson (2010) conducted a linear multivariate regression analysis to examine the relationship between state-level text messaging volumes and the number of distracted driving fatalities. They controlled for variables such as precipitation, temperature, percentage of vehicle miles traveled on urban roadways, total state vehicle miles, state unemployment rate, region, and year. Using this regression analysis they predicted the number of distracted driving fatalities if texting volume was zero. The results showed that the increase in cell phone subscriptions during this time did not correlate to the changes in distracted driving fatalities, but there was a strong relationship between the fatalities caused by distracted driving and the average monthly number of text messages sent in a state. Using their regression model, they predicted that the rapid increase in texting volumes resulted in more than 16,000 additional distracted driving fatalities from 2002 to 2007. Wilson and Stimpson (2010) also claimed that for the average state, an additional one million text messages sent per month would increase the distracted driving fatalities in that state by more than 75%.

Jacobson, Nikolaev, and Robbins (2010) studied the effect of cell phone bans on driver safety. They wanted to know if laws banning cell phone use while driving made roads safer, decreasing accident risk. They examined the accident rates in New York (the first state to have a statewide hand-held cell phone ban) by counties. Jacobson, Nikolaev, and Robbins (2010) compared counties’ fatal automobile accidents and personal injury accidents before and after the cell phone ban took effect. Another important variable they looked at was driver density by county. They used a one-tailed t-test to analyze the data. The results showed that 46 out of 62 New York counties experienced a decrease in fatal automobile accidents, 10 of which were at a statistically significant level. All 62 counties experienced a decrease in personal injury automobile accidents, with 46 being at a statistically significant level. Overall, New York experienced a decrease in both accident categories at a significant level with the ban.

Clarke and Loeb (2009), on the other hand, were the first to study the effects of cell phones on pedestrian fatalities. Their data came from various U.S. sources and included census data, a National Highway Traffic Safety Administration (NHTSA) study, and Cellular Telecommunications and Internet Association (CTIA) data, all from 1975 to 2002. Clarke and Loeb (2009) used a mathematical model and regression analysis to conduct their study. The variables they included were unemployment rate, per capita ethanol consumption, vehicle miles driven, total interstate, urban and rural highway mileage, population, blood alcohol content, real GDP, year, and number of cell phone subscribers. The results of the study suggested an interesting nonlinear effect. Clarke and Loeb (2009) found that when cell phones first were adopted they had a negative effect on pedestrian fatalities; however, at a certain number of cell phone subscribers the life-saving effect of cell phones overtook the life-taking effect. Then, as cell phone subscriptions continued to increase, the life-taking effect again took over. As the number of cell phone subscriptions increases the number of pedestrian fatalities also increases.

All three articles agreed that despite numerous past studies and conflicting results, there is little statistical evidence that increasing cell phone use is directly related to increases in automobile accidents or fatalities. All three, however, suggested that cell phones in some way have a negative effect on automobile accidents and fatalities.
I believe that cell phones have a negative effect on driver safety. We need to look deeper into how people are using their cell phones rather than overall use, similar to Wilson and Stimpson’s (2010) texting volume study. With the popularity of smartphones and the ability to access the Internet and use applications, will we see a greater increase in auto accidents as more and more people adopt this technology? Or will future cell phone technology advance so that the life-saving effect found by Clarke and Loeb (2009) increases and extends to drivers as well as pedestrians?

**Economic Model and Data Description**
Accid = α + β₁text + β₂cell + β₃primary + β₄timepass + β₅vmt + β₆popdens + β₇under25 + β₈ur + β₉beertax + β₁₀gastax

The above equation is the basic economic model for my research. I investigated the effect of text messaging bans on road fatalities by doing a cross-sectional study among U.S. states. The variables used in the study are defined in table 1.

**Note:** Data for the above variables were collected from all 50 states plus Washington, D.C., for the third and fourth quarters of 2009.
The dependent variable is *fatalities*. This measures the total road fatalities in a state for a quarter (three months). I measured this variable in two different ways. First, I collected data on all fatal accidents for each state (*accid*). Then, I collected data on all fatal accidents involving drivers with any blood alcohol content for each state (*anybac*). Creating these two dependent variables helped me examine the effect of alcohol consumption on my research. The data for these variables came from the National Highway Traffic Safety Administration Fatality Analysis Reporting System (FARS). The mean number of total fatal accidents is 154.47, while the mean number of fatal accidents involving alcohol is 56.5. The standard deviations are large for both total fatal accidents and fatal accidents containing alcohol, 58.0 and 152.66, respectively. The highest number of total accidents in a quarter was 743 and the lowest was five.

The first independent variable, and the variable of interest in this study, is *text messaging bans while driving* (*text*), specifically which states have them and which states do not. This is a dummy variable, so states with bans were coded as “1” and states without a ban were coded as “0.” As of today, 30 states plus Washington, D.C., have bans on texting while driving, which equates to 74.5% of the country with bans. These bans are on all drivers, regardless of age. This data is from the Insurance Institute of Highway Safety (2011), which keeps an updated list of laws restricting cell phone use for every state.

The second, third, and fourth independent variables deal with details of the text messaging bans. *Cell* is another dummy variable stating whether or not there is an all handheld cell phone ban in a state. This means that using a handheld cell phone in any way while driving is illegal. This is important because drivers in states with stricter laws for all cell phone use while driving will probably be less likely to use their cell phone while driving. The more laws there are, the less likely texting while driving will occur. Today, eight states plus Washington, D.C., enforce an all handheld cell phone ban (IIHS 2011). *Primary* is defined as the degree to which the ban can be enforced; that is, whether the law is primary or secondary. Primary means that a driver can be pulled over and cited just for texting while driving, whereas under a secondary law, the driver would have to be breaking another law in order to be cited for texting while driving. This variable helped determine the degree to which the ban is enforced, which has a direct link to the ban’s effectiveness. States with primary enforcement should have a lower number of fatalities; therefore, there should be a negative relationship between fatalities and the third independent variable. *Timepass* measures the number of months that have passed since the text messaging ban was established. The length of time a ban is in place will affect how well the ban is enforced and followed. I would expect that states with longer amounts of time with the ban in place will have lower fatalities, so this would be a negative relationship between the variables. Texting bans are new to a majority of the states so the mean of this variable is relatively small.

*Vmt* is the number of vehicle miles driven in a state in a given year. This is one of the most important control variables to include when conducting studies on traffic accidents and fatalities. After all, the number one cause for traffic accidents is simply driving. The average number of vehicle miles driven in the data set was 4,864.2 million. Due to the variety of state sizes, we see a wide range with this variable. The District of Columbia recorded the least number of miles at approximately 294 million, while California had the greatest number of miles with 27,975 million. This data was collected from the U.S. Department of Transportation Federal Highway Administration (2011).

The remaining variables include *state population density*, *population under the age of twenty five*, *state unemployment rate*, *state gas tax*, and *beer tax*. These are all common variables used in state-level studies dealing with traffic accidents and alcohol
consumption. These variables were collected from U.S. census data (2011) and data from the Tax Foundation (2011).

**Regression Analysis and Results**

I ran several regressions to determine the best model. When running regressions to determine what combination of variables created the best fit regression, I used total fatal accidents \( (accid) \) as my dependent variable. Once the best model was determined, I ran the same regression on fatal accidents where alcohol was involved (\( anybac \)). My original regression with the 10 original variables produced the following results found in table 2:

*Note: \( R^2 = 0.9561, R^2 \) adjusted = 0.9512.*

This regression had an adjusted R2 value of .9512, which shows that the variables included do a good job in explaining the variance in fatalities. However, not all the variables are statistically significant. This led me to run a variety of tests to create the best model possible. After running many regressions and econometric tests, I came up with my best model, displayed below:

\[
\text{Accid} = \alpha + \beta_1\text{text} + \beta_2\text{cell} + \beta_3\text{vmt} + \beta_4\text{gastax} + \beta_5\text{beertax} + \beta_6\text{beertaxsq} + \beta_7\text{textavgvmt}
\]

In the final model some variables from the original regression were eliminated. There were also a few variables added. The most important variable added was \text{textavgvmt}, which is an interaction term between text and the deviation from the average vehicle miles traveled in a state. For example, this variable for Illinois in 2009 with a texting ban would be 3,328 (8192-4864), the difference in vehicle miles traveled from the mean multiplied by one. States with lower than average vehicle miles traveled, like Delaware, will have a negative number: -4,145 (719-4864). For states without a texting ban this variable will be zero. This variable made the final regression more significant and made the interpretation of the text ban variable easier to understand and
apply. The final regression was run twice, first with \textit{accid} as the dependent variable and second with \textit{anybac} as the dependent variable. The statistical results for both regressions are shown below in tables 3 and 4.

\textit{Note: \(R^2 = 0.9217\), \(R^2\) adjusted = 0.9158.}

The final regression output with \textit{accid} as the dependent variable showed six out of the seven variables to be statistically significant. The variables \textit{cell}, \textit{vmt}, \textit{gastax}, \textit{beertax}, \textit{beertaxsq}, and \textit{textavgvmt} were all significant at the 95% level. The text variable had a p-value of 0.09 so it is significant at the 91% level. This regression provided the highest adjusted \(R^2\) value, 0.9570. This means that the variables included in my best regression account for 95.70% of the variation in total fatal accidents. This high number shows that the data is of high quality and the model is good.

The same regression run with \textit{anybac} as the dependent variable showed four out of the seven variables to be statistically significant. \textit{Text}, \textit{vmt}, \textit{beertax}, and \textit{textavgvmt} were all significant at the 95% level. \textit{Cell} recorded a p-value of 0.148, \textit{gastax} was 0.122, and \textit{beertaxsq} was 0.074. This regression showed less explanatory power with an adjusted \(R^2\) of 0.9158.

Cell phone bans were shown to decrease total fatal accidents in a state by approximately 28 accidents per quarter (three months). Approximately nine of those
fatal accidents per quarter involved alcohol according to the *anybac* regression. However, this was not statistically significant.

The regressions showed a significant increase in fatal accidents as the vehicle miles traveled in that state increased. For every 100 million miles driven in a state per year, you can expect approximately 3.24 fatal accidents per quarter. From that same 100 million miles, approximately 1.28 out of the 3.24 fatal accidents per quarter would involve alcohol.

Gas tax only showed significance in the total accidents regression. If a state increases its gas tax by $.01, you would expect to see a decrease in fatal accidents by approximately one per quarter. The effect on alcohol-related accidents was approximately half of the total, showing that a $.01 increase on the gas tax would decrease fatal accidents involving alcohol by approximately 0.48 per quarter.

The regressions showed that beer taxes increase fatal accidents until the beer tax is nearly $0.65 per gallon. This was not expected and may be the result of an omitted variable that beer tax rate is correlated with, such as drinking habits. However, when beer taxes become greater than $0.65 per gallon there is a negative effect on fatal accidents. Therefore, a state that wanted to curb fatal accidents by increasing a beer tax would have to charge more than $0.65.

In terms of the variable of interest, these results indicate that texting bans do in fact decrease fatal accidents. This is significant at the 90% level for total fatal accidents and at the 95% level for fatal accidents involving alcohol. When interpreting this variable in the regressions, we must interpret both text and the interaction term between texting bans and the deviation from the mean vehicle miles traveled as the same time. The regression shows that in terms of total fatal accidents, in states that drive the average vehicle miles traveled in a year (∼4,864 million miles) a texting ban will decrease fatal accidents by 14.95 per quarter. Fatal accidents involving alcohol account for approximately 10.038 of those accidents per quarter. So we can conclude that texting bans only decrease non-alcohol-related accidents by approximately 4.95 per quarter.

The beta on the interaction term tells us that as vehicle miles traveled in a state increases, states with texting bans will see less of an increase in fatal accidents. For example, a state with no texting ban that is one standard deviation above the mean vehicle miles traveled in a year will see an increase of approximately 163 total fatal accidents per quarter compared to the average state. If that same state had a texting ban, it would see a decrease of 14.95 fatal accidents per quarter, plus an additional 23.19 fewer fatal accidents per quarter. So a state one standard deviation above the mean in terms of vehicle miles traveled and a texting ban in place will only see a 124.86 increase in fatal accidents per quarter instead of the full 163 it would see without a texting ban. This shows that texting bans curb the effect of vehicle miles traveled on fatal accidents.

**Conclusion**

Are text messaging bans making roads safer? Yes, based on the research above texting bans do in fact decrease the number of total fatal accidents and accidents involving alcohol. This study shows a significant relationship: as vehicle miles traveled increases, states with texting bans see a smaller increase in fatal accidents. This lessened effect of vehicle miles traveled on fatal accidents can be simply stated—texting bans make driving less dangerous on a mile-per-mile basis.

In conclusion, this research shows through multivariate regression analysis the effect of texting bans on fatal driving accidents. This research, although limited, did
produce significant results. Given the opportunity to continue this research, I would change a few aspects. First, I would collect more data over longer periods of time. This data only reflects two quarters of 2009; a wider range of data would provide more significant results. I would also include additional variables, such as percent of driving population under 25 and rural versus urban driving miles. A deeper look into this research would be required before making text messaging and driving policies based on this analysis.
